

HAWART

Blade Transport Solutions

- Lifting Adapters
- Pendulum Frames
- Tandem Frames
- Blade Interfaces

HAWART is a leading developer and supplier of custom rotor blade transport solutions, including interfaces for lifting adapters, tandem and pendulum frames for self-steering trailers in road transportation. With our pendulum and tandem frame solutions, torsional loads on the blade are minimized during transportation - significantly reducing stress on and potential damage of the blade.

The HAWART system provides an optimized low-height geometry, minimizing the overall transport height for safer and more efficient road handling. Our transport solutions can be seamlessly integrated into existing transport systems from manufacturers such as DOLL, Faymonville, Goldhofer, Scheuerle and others.

KEY FACTS:

-  Proven System
-  Modular Design
-  Safe Handling
-  Certified Lifting Equipment
-  Robust Construction

YOUR BENEFITS:

-  Attractive Total Cost of Ownership
-  Safety through OEM Design Approval
-  Optimized Logistics Processes
-  Interfaces Developed and Approved in Cooperation with the OEM
-  Customized on Existing Transport System
-  Designed for Compatibility Across Different Rotor Blade Types
