

Riccardo Capraro

From Paper to Production

Your trusted partner for DevOps, cloud and platform engineering

I help engineering leaders deliver on their promises

Why me? I get the job done, I help you shape the organization, and have a track record of delivering value in multiple domains and industries. People trust me because I deliver. They come back because that is only 50% of what they get.

WHAT PEOPLE SAY

[See all recommendations on LinkedIn](#)

“ Riccardo [...] truly makes a difference, both technically and as a person. [...] what truly sets him apart is that this technical excellence also comes with an equally valuable human dimension [...]”

“ Riccardo [...] brought exceptional technical excellence and innovative perspective into architecture planning and early project decisions. Beyond technical, Riccardo demonstrated a crucial set of management and leadership skills. He excelled in establishing inclusive communication and documentation practices for a highly diverse team and fostering a healthy culture where challenging decisions were desired. [...]”

WHAT I DELIVER

■ Cloud Native Enablement

Kubernetes, GitOps, observability, reliability, IaC

■ DevEx improvements and driving adoption

Golden paths, self-service platforms, team upskilling.

■ Platform & Cloud Strategy

Team topology, capability mapping, adoption roadmaps.

SOME EXAMPLES

- I delivered full pipeline migrations, brought critical systems in production, scaled cloud infrastructures
- I have designed developer environments and microservice templates in multiple organizations
- Launched and led a platform initiative through its first six months (design, team upskilling, implementation)

HOW I WORK

Embedded engagement, no PowerPoint consulting. I join the team, average duration 3-6 months, complimentary strategy workshops and upskilling, available solo or with trusted expert partners.

YOU ARE A FIT IF...

- Your teams are running fast but struggle to build cloud or internal developer platforms that developers actually use.
- Your setup needs a boost - more effective delivery, better DevEx, fewer surprises in production.
- You want a trusted partner who joins your team and help you achieve your engineering goals - not a consultant who drops decks and disappears.

If that is the case, let's get started.

AWS & KUBERNETES CERTIFIED
