

USER FRIENDLY IDE FOR ALL TESCO PLC SYSTEM CONFIGURATION AND SETUP

Windows® Application

WinBench64® is a Windows-based application that provides a complete integrated development environment (IDE) for the complete setup and configuration of all TESCO PLCs. WinBench64 software supports all L3000e® configuration tables, a variety of communication connections, and will simultaneously share the communication ports with your SCADA software.

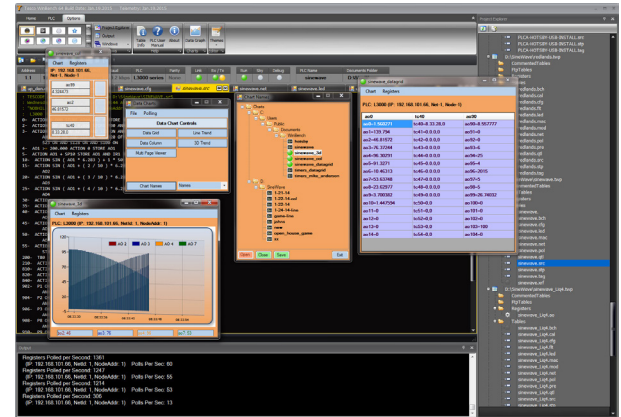

User-Friendly

Designed around an intuitive, user-friendly interface, WinBench64 is very simple to use. WinBench64 neatly packages the various tables associated with the L3000e, L2000®, and LIQ 5® controllers into a project. WinBench64 then allows you to effortlessly manage PLCs and their associated configuration tables and process program. Pop-Up menus make editing quick and simple. Need help? Simply move the mouse over the item and WinBench64 displays hints for that item.

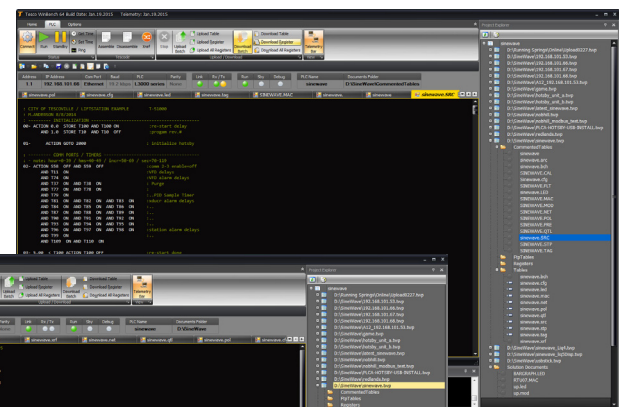

Call us and see for yourself how Tesco Controls can make a difference on your next project.

Features

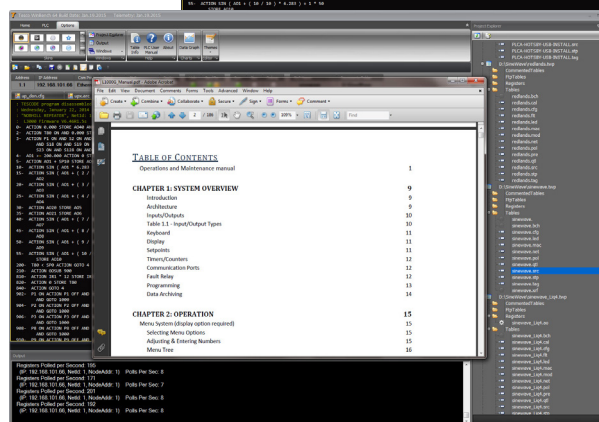

- » Real-time register data monitoring and trending
- » Transfer single tables or complete projects to the PLC
- » Change PLC modes, retrieve/set PLC real-time clock
- » Contains complete text editor, unlimited file size
- » Context-sensitive mouse-over hints
- » Operates over existing telemetry communication channels
- » Control of full hardware handshake signals for communications
- » Upload/download all configuration tables and the process program
