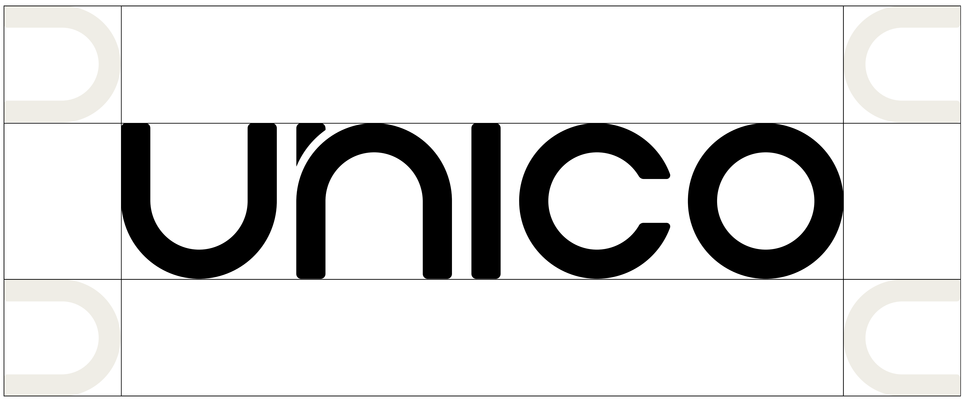
Clearspace

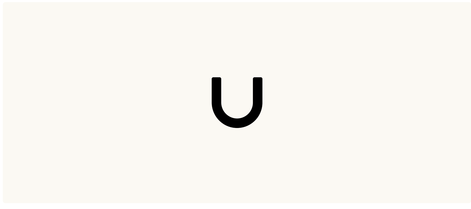
Our logo is designed to scale easily while remaining legible. The logo should always have an appropriate amount of clear space surrounding it equal to 75% of the width of the ‘Unico U’.



Logomark

The logomark can be used when the brand identity has already been established. Examples include the footer of the website, interior spreads of printed collateral, app icons, and swag.

Logomark on Light



Logomark on Dark

Favicon

Do Not Do

Restrictions to the logo treatment help maintain consistent brand identification with consumers. It is important to not alter the logo in any way beyond what is outlined in this style guide.

Do not alter any of the letterforms in the Unico type. For example, don't remove the notch on the 'N'.

Do not change the color of the Unico logo. It should only be used in black (#000000) or white (#FFFFFF).

Do not stretch the Unico logo. Ensure that the aspect ratio is locked before scaling the logo up or down.

Do not use the logo on a color that makes it illegible. Opt for the reverse version of the mark if necessary.

Brand photography

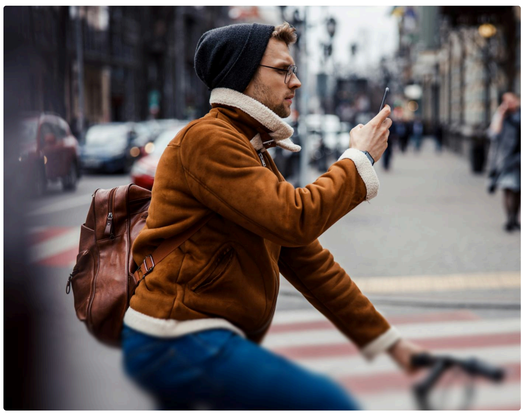
Photography

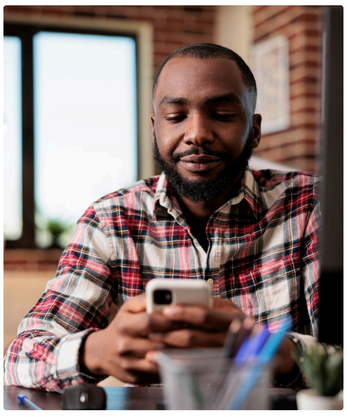
Biometric Style

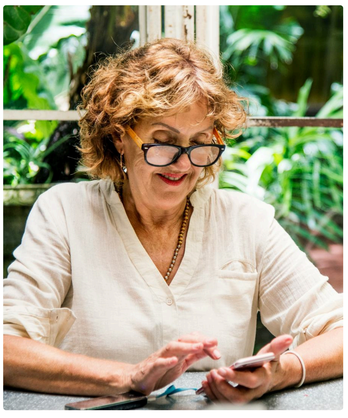
Photography should feature realistic end users actively engaging with our software. Subjects should have soft, natural smiles and maintain direct eye contact with the camera—key cues that make the moment feel like a live facial biometric scan. These expressions help convey trust, authenticity, and the real-world experience of using Unico's verification technology.

Candid Style

Prioritize capturing authentic, relatable moments that reflect the everyday experiences of our end users. When UI overlays are not paired with our biometric photography style, this candid approach should be used instead. Imagery should feel rich and warm in tone, featuring people who could naturally be engaging with Unico's identity verification process.



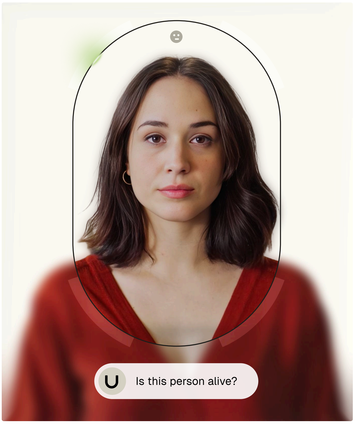


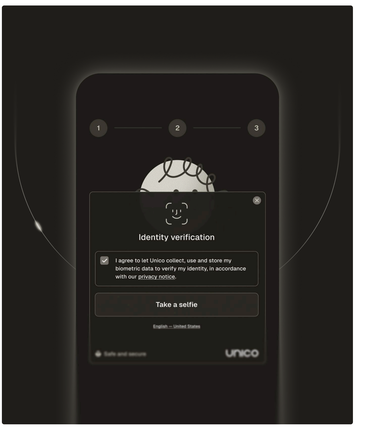


Visual components

Visual Components

Brand Elements





Real-Time Data... Fast

UI overlays and authentic end-user photography pair seamlessly with subtle glows to illustrate the product in action. A clear, intentional color system highlights the status of each authentication attempt, signaling which data points have been successfully validated.

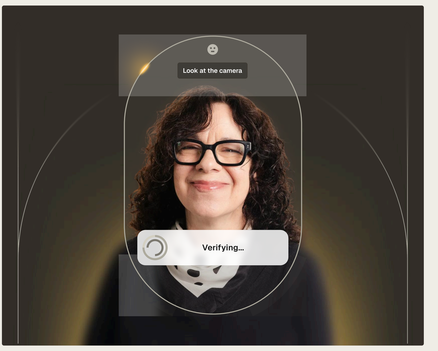
Clean Product UI

The simplified product UI features live text, purposeful blurs, and a minimal, modern environment that gives prospects a clear, immediate understanding of the Unico platform's speed and efficiency. Refined mobile mockups and expressive end-user photography work together to create an elevated, intuitive narrative that's easy to follow from start to finish.

Platform Visualizations

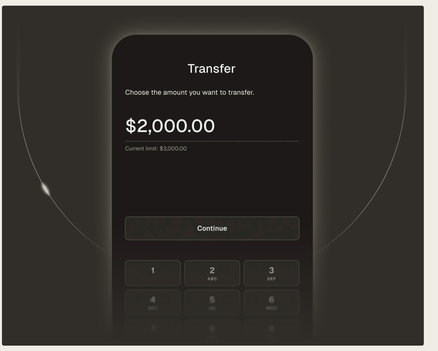
Independent Platform Illustrations

Illustrations that do not include phone bezels use a pill-shaped frame to anchor facial biometrics. This device reinforces visual continuity with the logotype while subtle glow effects communicate verification status and system activity.



Phone Platform Illustrations

Illustrations that include phone bezels should only appear within animation sequences or in scenarios where people are not featured. This maintains a cohesive visual language while still allowing the product to be represented in its true form.



Data Visualization

Product-free Illustration

Keep visuals fresh, engaging, and impactful. When facial biometrics or UI elements are not the most effective way to support messaging, incorporate reductive data visualizations and diagram-style illustrations that highlight the user journey.
