

## **Feedback on equipment operation**

Dear Igor,

RUE "Production Association "Belorusneft" expresses its gratitude to the specialists of LLC "NAFTAMATIKA" for the work performed on supply, commissioning, and technical support of WellSim control systems and Naftamatika SCADA dispatch control and data acquisition systems.

These systems made it possible to:

- monitor well operation in real time (operating status, dynagraph card, loads, etc.);
- perform optimization of well operating modes by regulating frequency;
- calculate the production rate of extracted fluid based on specified parameters;
- analyze technological parameters of wells for timely prevention of possible malfunctions and optimization of surface and downhole equipment operation.

During the operation period, the equipment and software have shown themselves from the positive side.

It is also necessary to note the unconditional fulfillment of the undertaken contractual obligations.

We hope for further mutually beneficial cooperation.

Acting Chief Engineer –  
Deputy General Director

S.A. Afanasyev
