

To: LLC "Naftamatika"

Review

JSC Tatneft has been collaborating with the company Naftamatika since 2011. During this time, more than 400 control stations have been installed based on the WellSim sucker rod pump (SRP) controller. All WellSim controllers are integrated into the SCADA system and are used both for control purposes and as a means of measuring flow rate.

During the period of operation, high operational reliability has been confirmed — less than 1% equipment failures. We consider this direction to be promising and look forward to further cooperation.
