

Your partner in advanced well engineering

№006 08/16/2014

Dear Sirs

I'd like to thank you for successful automation of our SRP's.

Your RPC and SCADA give us opportunities for pumping unit control, malfunction diagnostics, metrology and statistics data collection. The customer support provided by company during installation, maintenance was helpful and efficient.

To date, all RPC's have been operating for 6 months including winter without failures.

We don't have exact statistics yet but all units equipped by RPC and connected to SCADA have been operating correctly with optimum pump fillage and pump intake pressure.

Built-in diagnostics helps us to prevent fatal accidents and adjust operating mode.

We are considering that project as a successful and hope for next step of installation.

With best regards
