

Electrification Made Simple. Results Made Real.

Gateway delivers commercial fleet electrification as one end-to-end system, combining vehicles, charging, and infrastructure to simplify deployment and keep operations running.

One Partner. One Complete System.

Most fleets are forced to piece together vehicles, charging infrastructure, and incentives across multiple vendors.

Gateway Fleets brings everything into one system, designed to match how your operation actually runs from day one.

Doing It Yourself

Evaluate trucks, charging, and incentives separately

Coordinate vendors, utilities, and timelines on your own

Take on upfront cost and infrastructure risk

Manage performance uncertainty once trucks are deployed

The Gateway Advantage

- ✓ One accountable solution across vehicles, charging, and operations
- ✓ Built to remove complexity and reduce risk
- ✓ No upfront capital required
- ✓ Predictable costs and reliable performance on real routes

The Numbers Have To Work

Vehicles, charging, and energy all impact cost, but when evaluated separately, they are difficult to model and trust.

Gateway rolls everything into one price so you know what you're paying and can plan with confidence.

Last Mile Electrification

Short, repeatable routes with depot-based charging and daily uptime requirements.

Linehaul Electrification

Routes with extended range, coordinated charging, and consistent cost per mile requirements.

35%

LOWER OPERATING COSTS
