

SmartExporter 2018 R1

Version 6.0.3

The current SmartExporter version offers comprehensive enhancements and optimizations, especially if you are using more recent SAP® releases like SAP® Basis 753 and 75d.

Please find an overview of the new features and improvements below.

Updating

Installing SmartExporter 2018 R1

- Run the installation of the current version by clicking the "setup.exe" file in your download package and follow the instructions in the install wizard. Previous SmartExporter versions will be uninstalled during the installation process.
- To be able to use all new features of SmartExporter 2018 R1, it is recommended to also implement the corresponding SmartExporter SAP® components version 6.0.0002.

SmartExporter

SmartExporter 2018 R1

Version 6.0.3

New features and enhancements

Online activation without user input (silent online activation)

- To facilitate the installation in server and Citrix environments and to make it more user-friendly, in addition to the silent installation the new version now enables you to run a silent activation of the SmartExporter license.
- For information on the silent activation of the license, run the "SmartExporter.exe" file in the SmartExporter installation directory with the -help parameter.

Optimized authorization check

- In the previous SmartExporter version if the SmartExporter SAP® components were not installed and the SAP® standard components had to be used instead, the error message „FU_NOT_FOUND" was displayed when initiating an extraction. So even if the user had the required authorizations (e.g. SAP_ALL) the extraction could not be run.
- With the current version the extraction can be run as usual again as long as the SAP® user has sufficient authorizations to run the SAP® standard components.

Extraction in remote desktop environments

- If SmartExporter ran a synchronous extraction in a remote desktop environment, it could happen that after an interruption of the session the extraction started from the beginning when the connection to the remote desktop session could be established again. This has been fixed in the current version. If an extraction is interrupted, it will continue at the point of the interruption and not start anew.

Upgrade to Microsoft .NET Framework 4.7.2

- Due to Microsoft's ongoing development SmartExporter has been adjusted to .NET Framework 4.7.2 and Visual C++ Runtime 14.16.27024.1. In case these versions do not exist on your computer, they will be installed automatically by the SmartExporter setup.

Version 6.0.3

SmartExporter SAP® components

Updated attribute change package for SAP® basis 753 and 75d

- For the installation of the Add-On for the SAP® basis 753 and 75d the attribute change package was updated due to changed requirements in SPAM/SAINT.

Message when using joins in Oracle

- Due to a change in the Oracle Bundle Patch 12.1.0.2.180417 an error message was displayed when running an extraction with joins. This has been fixed by providing a new transport (Add-On SP2) in the current SmartExporter version.
