

ORACLE
NETSUITE

Integration

Nuvei + Oracle NetSuite

Every payment, **everywhere.**

Nuvei's NetSuite integration helps merchants streamline payment acceptance and reduce manual effort by enabling in ERP payment processing across NetSuite sales and receivables workflows.

Faster time to cash: Address DSO pressures by streamlining how customers pay.

Less manual work + fewer errors: Reduce fragmented processes and manual data entry by processing payments within integrated NetSuite workflows.

Easier reconciliation: Improve back office efficiency by streamlining payment processing and supporting automated reconciliation.

Stronger security posture: Tokenization helps reduce exposure to sensitive payment data while supporting ongoing payment operations.

Lower costs on eligible B2B transactions: Level 2/3 enrichment can reduce interchange on qualifying transactions (where applicable).

What's **included?**

- Integrated card payments (supports card present swipe/chip/tap and card not present processing).
- Integrated ACH processing for NetSuite payment workflows.
- In transaction payment processing inside NetSuite
- Pre authorizations to support common order to cash scenarios.
- Integrated invoicing aligned to NetSuite billing processes.
- EMV support for card present transactions.
- Tokenized payment card & ACH information to enable secure processing and support follow on actions.
- Voids & refunds supported within the NetSuite-connected workflow.
- Complete payment history of payments and authorizations for better auditability and service.
- Data optimization (Level 2 & Level 3 enrichment) to support eligible B2B cost optimization.
