Smart Approvals

One Approval Center for Your Entire Business.

# AzdanApps Smart Approvals

## Challenges

Organizations struggle with fragmented, manual approval processes scattered across departments – causing delays, poor visibility, inconsistent governance, compliance gaps, and dependency on custom scripts.

Without a unified framework, approvals become bottlenecks that slow operations, weaken audit trails, and create segregation-of-duties risks across entities and subsidiaries.

## Solution

Smart Approvals delivers a 100% NetSuite-native approval engine that centralizes all approvals into one governed, auditable workspace – eliminating custom scripting with no-code workflow modeling, enforcing policy controls, and enabling scalable approval governance across transactions, subsidiaries, and diverse business units.

### Centralized Approval Center

One interface consolidating all NetSuite approvals across departments, subsidiaries, and transaction types.

### No-Code Workflow Engine

Visual modeling of sequential, parallel, quorum, and hybrid approval patterns without scripting.

### SLA & Escalation Management

Dynamic calendars, automatic due-date calculation, configurable escalation rules, and delegation controls.

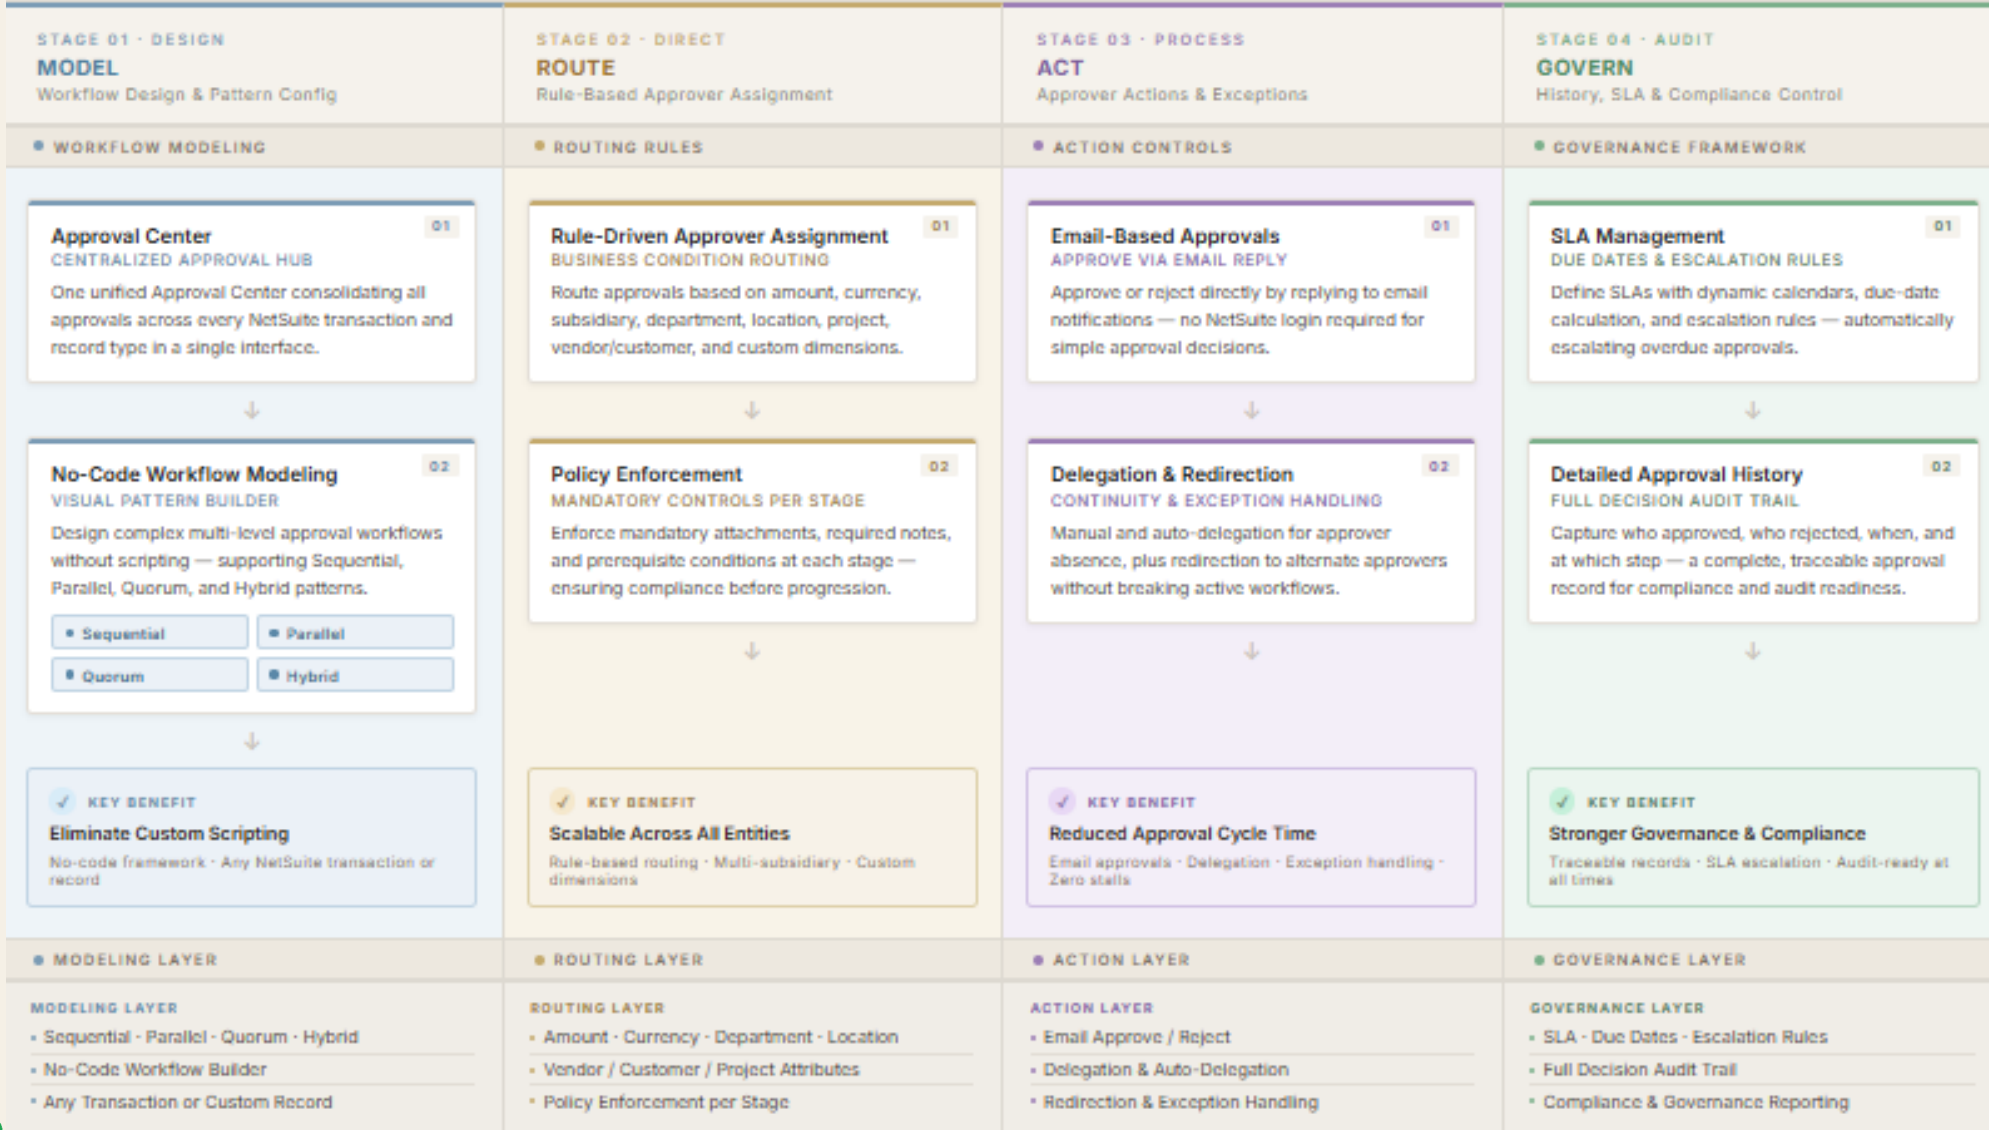

### Policy Enforcement Controls

Mandatory attachments, required notes, and prerequisite conditions enforced at each approval stage.

# Smart Approvals — Multi-Level Approval Workflow Framework

No-Code Workflow Modeling · Rule-Based Routing · SLA Management · Approval Center
