

Have greater confidence in your product dimensions and attributes – create and update product data with simple and intuitive capture flows.

Overview

Product dimensioning is extremely important if you want to make the most out of your Packsize solutions. When your products are properly dimensioned, it ensures our machine systems are able to create a perfectly right-sized box for each and every order. Right-sizing optimizes your packaging process, minimizing excess corrugate and void fill, and reduces shipping costs and environmental impact.

PackNet Dim is a dimensioning software that ensures accurate representation of SKU data in your inventory. By leveraging cloud infrastructure, the solution eliminates in-house server limitations and costs. Its intuitive interface enables accurate data capture and updates for dimensions, as well as additional attribute capture, like nesting and fragility.

By seamlessly integrating with Packsize and third-party hardware and software, PackNet Dim allows businesses to securely scale their operations. It provides real-time access to updated product data, empowering confident decision-making. Box production features streamline the packaging process by triggering box creation through barcode scanning when linked with PackNet Cube. PackNet Dim simplifies data management, enhancing reliability, performance, and productivity.

Product Features

- Intuitive user interface for easy creation and updating of product attributes
- Supports large data sets of product SKUs
- Optimized box creation flow with seamless integration of PackNet Dim, PackNet Cube, and PackNet Core into a single user interface.
- Multiple dimensional data collection paths for different user proficiency levels
- Barcode scanner integration for quick recognition of product identifiers
- Provides cloud security with data encryption and real-time threat detection and response
- Built on scalable cloud infrastructure

Talk to an Expert

Our dedicated team of packaging specialists and engineers will apply their industry knowledge and expertise to help you reduce your carbon footprint, increase efficiency, and improve your overall packaging process flow.
