

ELMI Power 3-Slide-Presentation for ICNC

08-2026

Redefining Charging Ecosystems

Who We Are

ELMI Power: Fast Charging, Wherever the Grid Falls Short

- Founded in 2024, headquartered in Germany (Niddatal) with a second site in Shanghai.
- ~20 employees, backed by seed funding from Sequoia China / HongShan.

Mission: making fast EV charging possible anywhere. Even where the grid can't support it.

REDEFINING CHARGING ECOSYSTEMS

Battery-Backed Fast Charging Infrastructure

- We design, build, and operate charging hubs for EVs.
- Modular product range: from single charging points for retail to large-scale depot systems for fleets.
- Delivering up to super-fast charging where it's needed, not just where it's possible.

Smart Energy Management Instead of Grid Upgrades

How

combining battery storage with real-time energy management software — turning a weak grid connection into high charging power without costly grid reinforcement.

Why

most locations that need fast charging don't have the grid capacity for it — and waiting years for an upgrade isn't an option.
Result: fast, affordable, deployable EV charging — wherever it's needed.

THANK YOU

ELMI turns grid constraints into a competitive advantage
