

Turning EV complexity into **clear decisions**.

For drivers. For charging networks.
For the future of electric mobility.

-  **DRIVERS**
Still face uncertainty around range, charging and trip planning.
-  **CHARGING OPERATORS**
Still lack visibility of where future demand will actually be.
-  **CAPITAL**
Bad infrastructure decisions can take years to recover.

— EV INTELLIGENCE LAYER

One platform. Two layers of value.

 **For drivers**

✓ Smart EV route planning

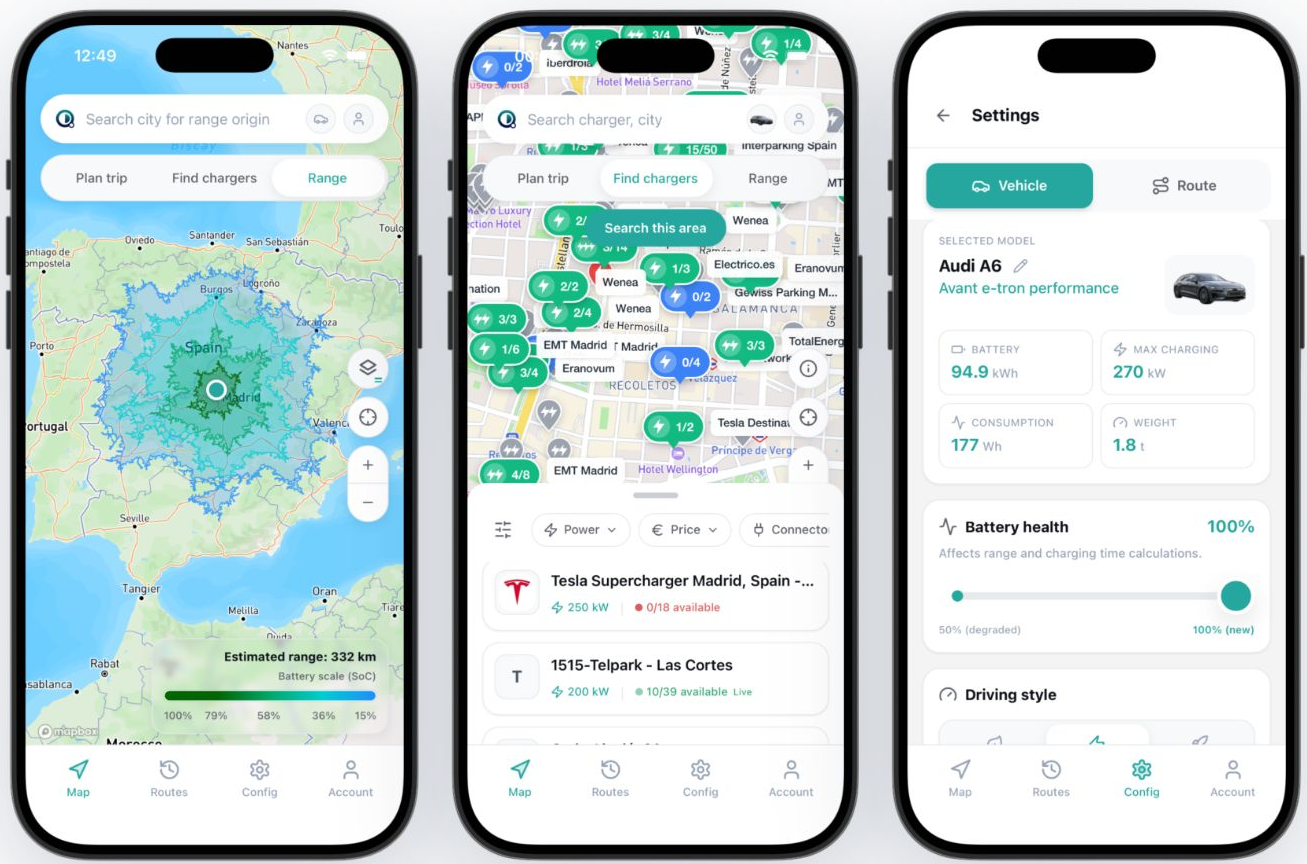

✓ Real-world range, not brochure range

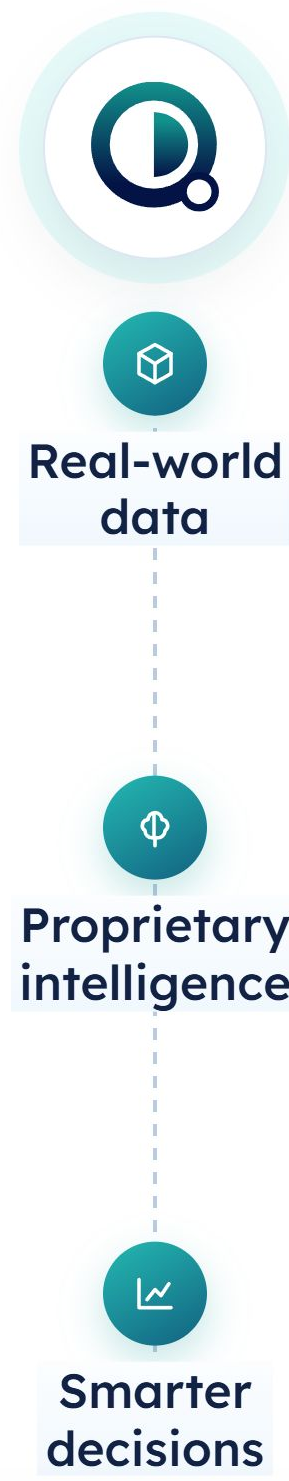

✓ Charging guidance with confidence

RANGE MAP

AVAILABILITY

YOUR EV

 **For businesses**

✓ EV recommendation tools & APIs

✓ White-label mobility solutions

✓ QuantumDrive Intelligence for charging demand

CORRIDOR OPPORTUNITY

A-3 · tramo km 225-250

MUY ALTA · 95

DATOS DEL PERIODO (EN BRUTO) → NORMALIZADOS (0-100, ESCALA LOG)

Sesiones potenc./año	71.502	→	98
Flujo de rutas	393	→	90
Cobertura HPC (inversa)	1	→	93

Each 25 km segment scored on **real route flow versus existing HPC coverage.**

THE FLYWHEEL

Every trip planned in the app becomes **demand signal before the charge happens** — and better intelligence makes the next trip better. **One dataset, two revenue lines.**

Why QuantumDrive can win

01
Unique pre-charging intent data

We see the trip before it happens — demand upstream of the charger, not the meter reading afterwards.

02
B2C app + scalable B2B model

The app generates the data; the API and Intelligence layer monetise it. One asset, two revenue lines.

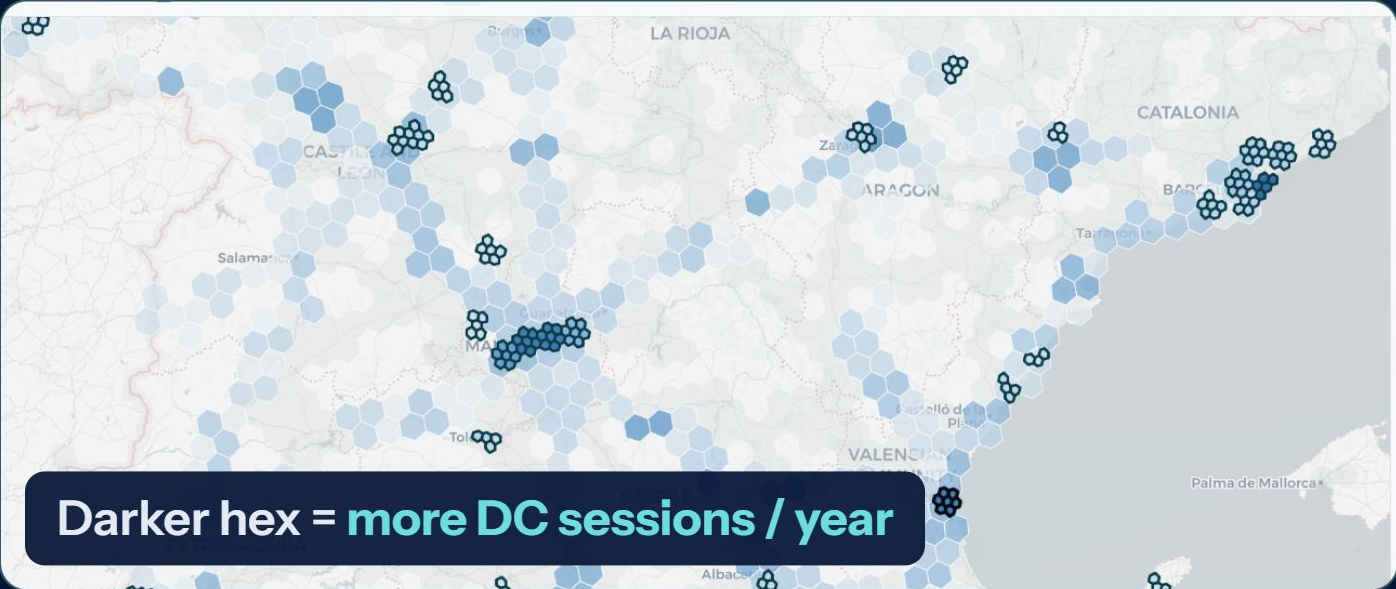

03
Real product, real validation

A live app planning real trips, and charging operators already testing the intelligence layer.

04
Built to become Europe's intelligence layer

Corridor by corridor, the same model scales beyond Spain with no new hardware to deploy.

STATION-LEVEL BUSINESS CASE, FROM REAL DEMAND
