

ONE HOME. THREE SYSTEMS. NO SHARED CHARGING DECISION.

At Manuel's solar home, the household, battery and EV share one electrical site. Their software still makes separate decisions.

Powerbeat gives the site one shared context.

FIRST, MAKE THE ELECTRICAL SITE UNDERSTANDABLE.

— One home becomes one coordinated Energy system. —

ONE OPERATING SYSTEM FOR ENERGY DEVICES.

AT HOME

Connect production, storage
and household demand.

ON THE ROAD

Connect vehicles, charging
objectives and mobility
Energy data.

ACROSS COMMUNITIES

Share Energy data and flexibility.
Coordinate locally. Add matching
and settlement over time.

POWERBEAT WILL BE THE OPERATING SYSTEM FOR ALL ENERGY DEVICES AT HOME AND ON THE ROAD.
