About shyftplan

The Berlin-based company shyftplan is setting new standards in workforce management for the manufacturing industry. The focus is on aligning shifts, developing talent, and ensuring quality. This enables businesses to boost productivity, reduce personnel planning costs, and simultaneously increase employee satisfaction.

By automating critical workflows, shyftplan creates an optimized planning process that puts people at the center. This allows companies to attract the right talent, reduce administrative overhead, and reliably achieve high efficiency rates for both personnel and machinery, even in situations with complex shift models or fluctuating demand.

The platform combines the shift scheduling tool shyftplanner with the qualification matrix shyftskills and real-time analytics. With ISO 27001 and SOC2 Type II certifications, it meets the highest security and compliance standards. As a long-standing SAP partner, the solution integrates seamlessly into systems such as APO, HCM, SuccessFactors, and other HR tools.

Since 2013, over 500 companies, including Siemens Energy, ZF, and Südzucker, have placed their trust in shyftplan.

Trusted by leading companies
