

Achieve Transformational Outcomes through Intelligent Document Processing

INDUSTRY CHALLENGE Many industries such as finance, insurance, healthcare, life sciences, government, etc., rely on document processing extensively for their core business operations. While industries have automated the process of document intake, digitization, and management, using OCR and other document automation tools, the key business information required from the documents to infer and make data-driven business decisions is still manual at large. The manual document review process is inefficient and includes human reviewers reviewing digitized documents to gather evidence that is required for business decision making. Also, with increase in digital adoption, businesses now face the twin challenges of having to deal with increasing document volumes and varying formats. It is estimated that over 80% of digital documents are in unstructured formats, which adds further complexity. The current manual process limits the ability to scale to the emerging data volumes and formats. As a result, the process of extracting business data from documents adds significant burden on the workforce, decreases efficiency and increases document processing costs.

OUR SOLUTION DigiDocPro.AI is an intelligent document processing (iDP) platform which is purpose-built to automate data discovery from a variety of forms and documents including structured and unstructured formats. DigiDocPro.AI not only classifies and extracts meaningful data, but more importantly discovers data relationships and actionable data evidence by presenting the content, context, and cognitive insights to aid in business decision making. As a result, businesses can achieve unparalleled performance outcomes in terms of higher efficiency gains, lower document processing costs and reduced human fatigue.

Digidocpro.AI Powered by

Business Benefits

- 35% ↓** Reduction in manual document processing effort
- 25% ↑** Improved Turn around Time
- \$ ↓** Reduced operating costs
- ✓** Compliance Enablement
- ↑** Faster Time-to-Value (TTV) - Operational Solution in Weeks not Months

Typical Industry Use Cases

- Healthcare (Federal, State and Commercial Health Insurance)**
 - Eligibility, Benefits, Claims Processing
- Life Sciences (FDA, NIH, CDC, Pharma Companies)**
 - Drug compliance reviews, adverse event reviews, clinical literature mining etc.
- Legal Industry (DOJ, OIG, HHS, LPO, Law Firms)**
 - Legal document review, transcript review, case deposition reviews etc.
- Credentialing Industry (DHS, OPM, DoD, Commercial Credentialing)**
 - Background processing for visa, credit bureau's etc
- Fintech (SEC, Banks, Financial Institutions)**
 - Loan processing, Credit card processing etc.
- BPO, KPO, Record Management**
 - Document/records processing, digitization

Empowers Decision Makers with Augmented Decision Intelligence to make Informed and Evidence-based decisions at Speed and Scale
