

INSTRUCTIONS

NFPA 25 states that stored diesel fuel shall be "tested for degradation at least annually." ASTM D4057 provides guidelines for sampling.

NFPA 110 states "a fuel quality test shall be performed at least annually."

Consult the product's safety datasheet (SDS) for safe handling and disposal.

- 1** **PREFERRED METHOD:** Complete the sample submission form online at dyneusa.com . If submitting online, only the kit number needs to be filled out on the other side of this form. The kit number can be found on the outside of all Dyne Sample Kits. If you aren't using a Dyne Sample Kit, a kit number will be generated for you online - this kit number should be written on the box containing the samples and on this form.

ALTERNATE METHOD: Complete all the information on the other side of this form and include it with your samples.

NOTE ON SAMPLE POINT: Please note sample point on the reverse side. An ALL LEVEL SAMPLE POINT IS RECOMMENDED, not required.

- 2** Fill each sample bottle to the fill line with representative sample. To prevent leakage, ensure the lid is tight and tape (electrical tape recommended, not included) the lid to the bottle. Using a marker, label each bottle with a number that corresponds to the sample submission form.
- 3** Wrap each bottle with the provided absorbant pads and place back into their provided bags. Pack the wrapped and bagged bottles back into the kit, even bottles you did not use. Place the sample submission form in the box, outside of the bags. Tape (shipping tape recommended, not included) the box shut. Write your return address on the outside of the kit.
- 4** Ship the samples to the laboratory: *Dyne Fire Protection Labs, 2357 Ventura Dr Suite 108, Woodbury MN 55125.*

NOTE: If shipping from outside the contiguous US, follow all local regulations for shipping diesel fuel.

Dyne's Diesel Sample Kit (2-Bottle) can be shipped to the lab using the included USPS (printed on the box) or UPS (in the box) labels within the contiguous United States. **DO NOT ship diesel kits in bulk, they must be shipped individually.** Fed Ex is not recommended unless your profile allows diesel shipments. Shipping is not included when shipping from outside the contiguous US - if you use a Dyne provided return label in these cases, the shipping cost + administrative time will be invoiced back to you.

NOTE: The shipping provided by Dyne does NOT include insurance. Dyne is not responsible for any lost packages or samples damaged in transit. You are responsible for recording tracking numbers.

- 5** A detailed report will be emailed to you within the turnaround time selected (if not selected, we will assume standard turnaround is sufficient). Get results within 5-business days with standard service, or 1-business day with rush service (surcharge applies, call ahead for availability). Note: The turnaround clock starts when the lab receives the samples. The report can also be viewed online at dyneusa.com once available.
- 6** The invoice will be sent after the report. Emailed invoices include a payment link. Credit Card and ACH accepted via this link. Please do not include payment with your samples. Contact Dyne for pricing details (dyne.lab@nfpaglobal.com, 800-632-2304).
