

WhisperWings Inflight Entertainment

Partnering with Airlines to Create a Sanctuary in the Sky

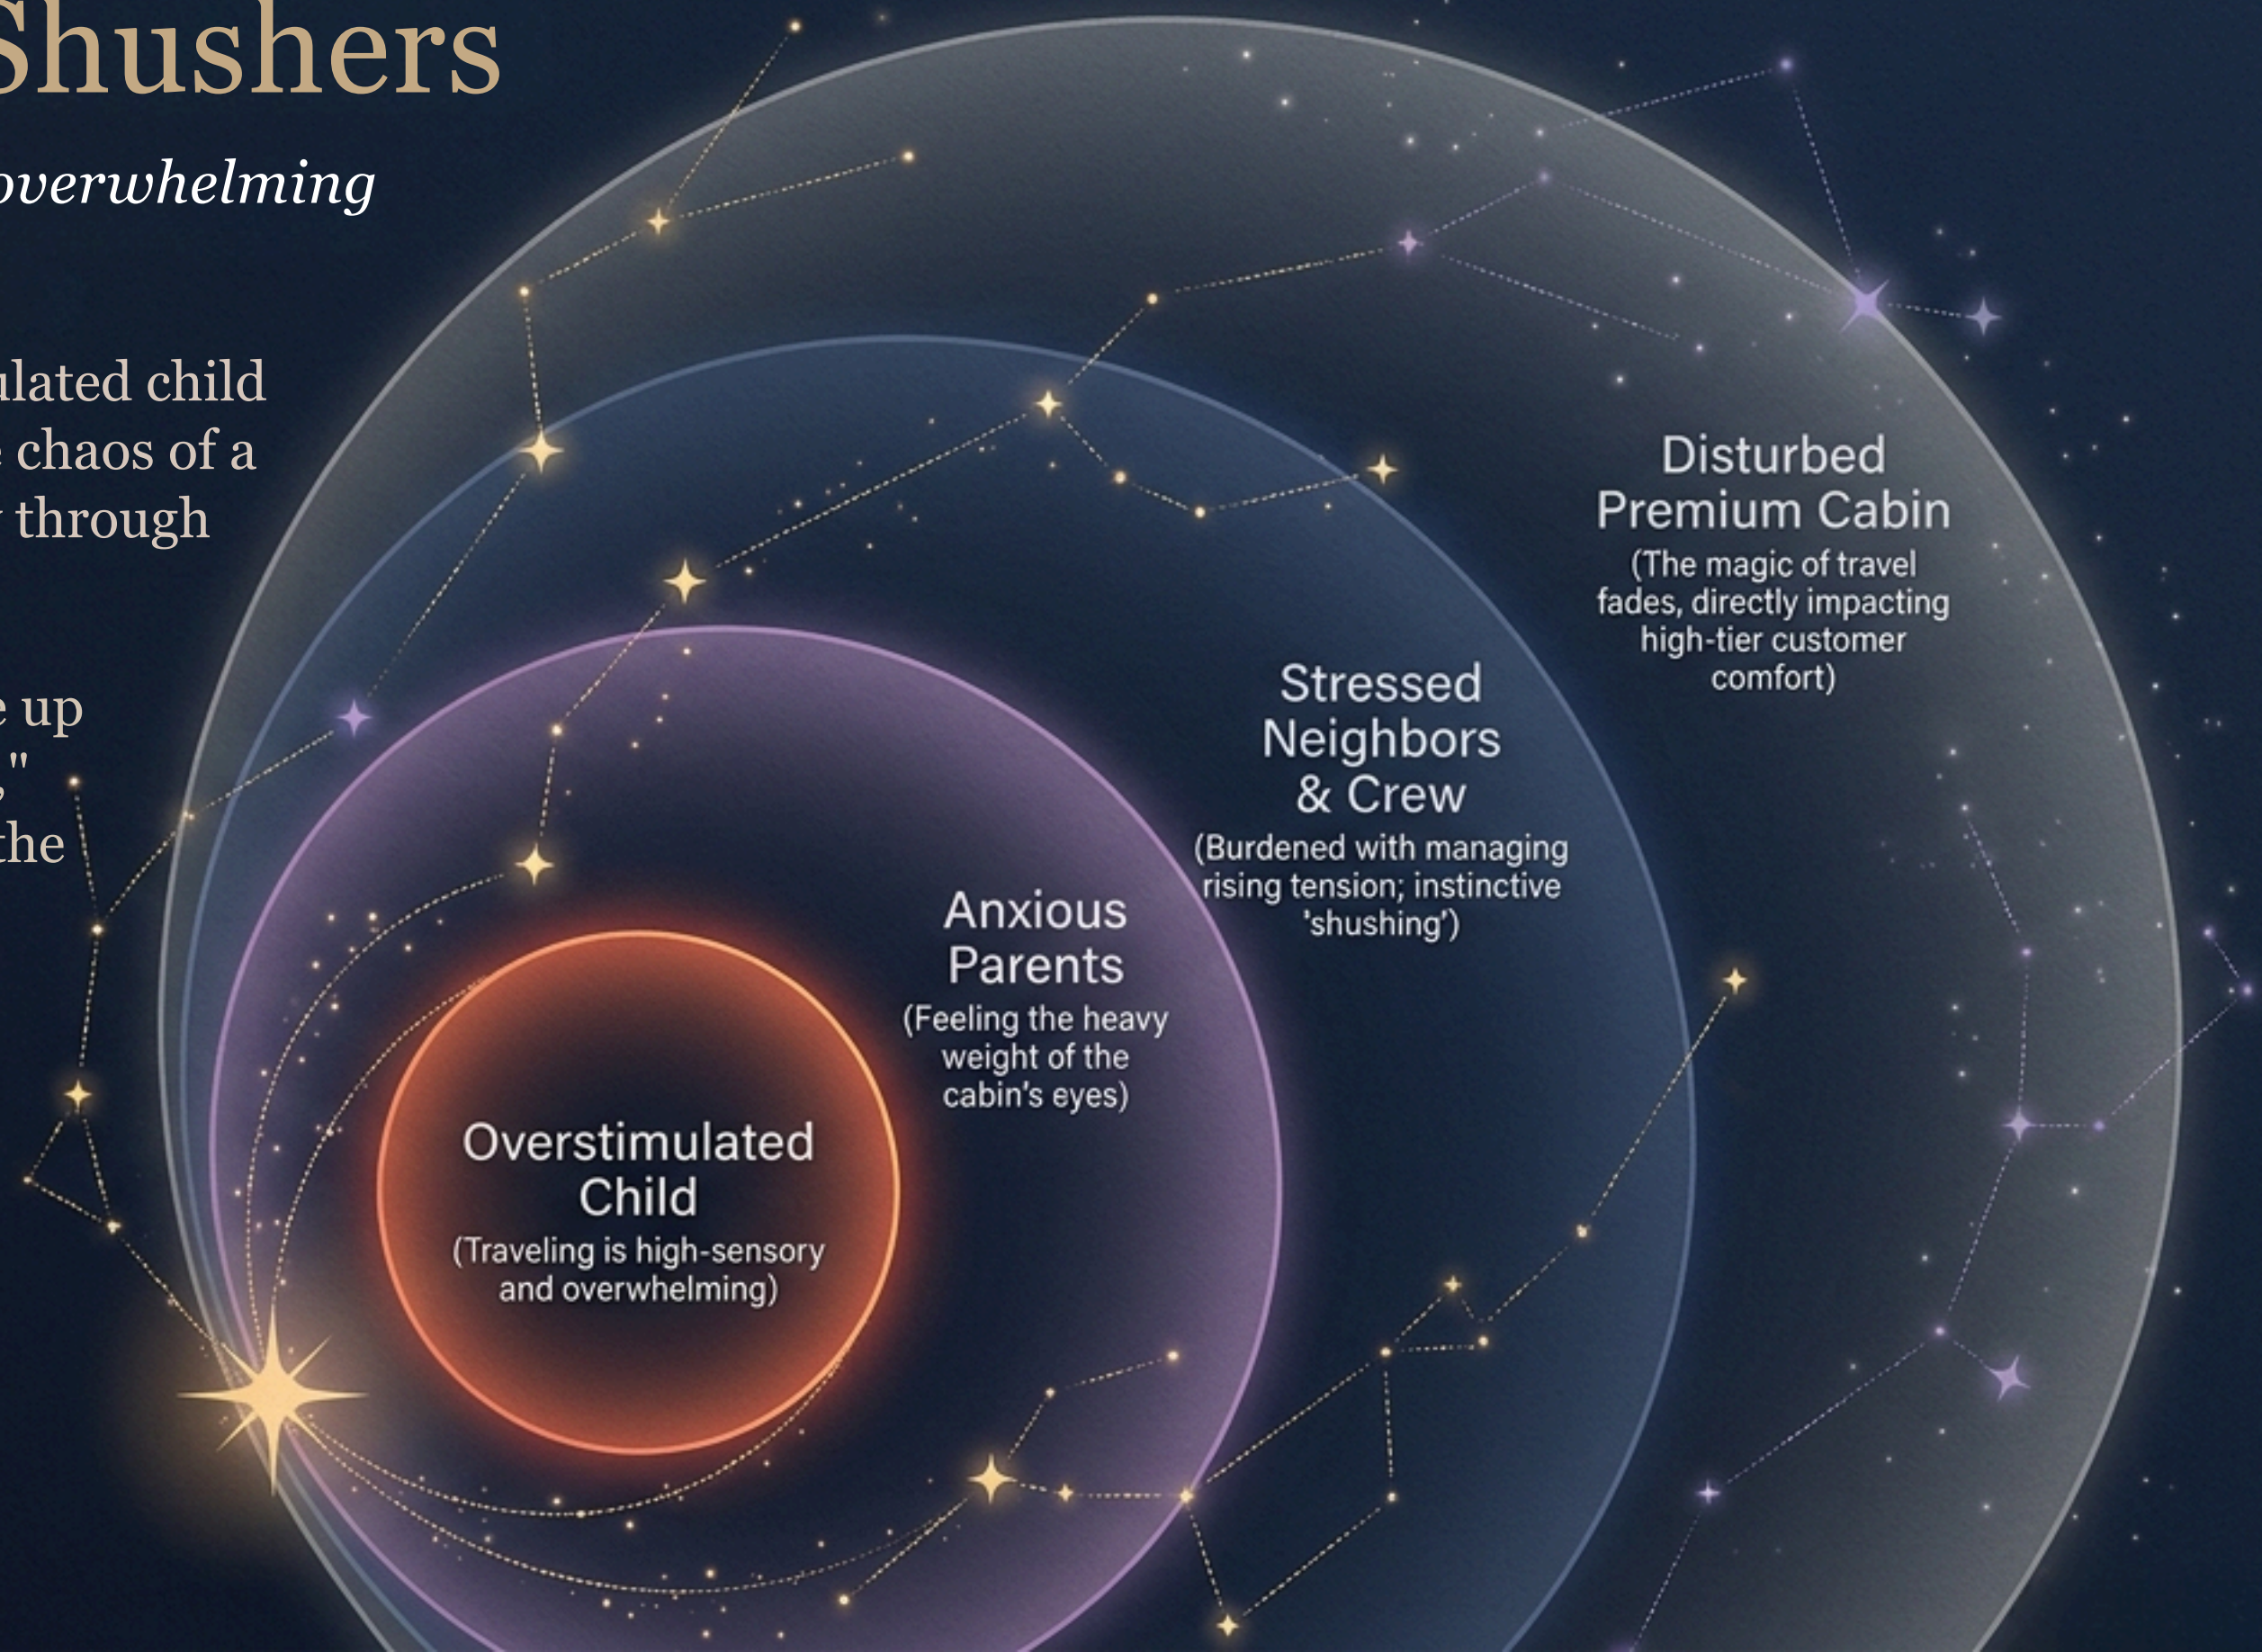

Hushing the Shushers

Air travel is a high-sensory, overwhelming adventure for little ones.

When an exhausted or overstimulated child struggles to find calm amidst the chaos of a flight, it sends a ripple of anxiety through the entire cabin.

As surrounding passengers tense up and instinctively start "shushing," parents feel the heavy weight of the cabin's eyes on them, and your flight crew is burdened with managing the rising tension.

The magic of travel fades, directly impacting the comfort of your premium passengers.

A Gentle Ripple of Cabin-Wide Calm

If we can proactively comfort the few little wanderers who are having a hard time on a long-haul flight, the cabin's tension instantly melts away. By extending a supportive hand to the few families who desperately need it, you trigger a beautiful "halo effect," gifting a quiet, relaxing journey to every single soul on board.

Top-Rated Public App

Curated Premium Content

Continuous Playback

Global Accessibility

Highly rated by parents and educators in the App store for real-world sensory regulation and emotional wellness.

A rich library of soothing fairy tales, gentle lullabies, and imaginative Q&As.

Multiple hours of meticulously paced audio designed to sustain deep sleep and calm.

Fully localized tracks natively recorded in English, Spanish, German, and French.

Elevate your airline from a mode of transportation into a gentle partner in family care.

Navigating the Expectations of Modern Travelers

As passenger satisfaction reaches new heights, airlines must look to critical growth segments—like family travel—to deliver the next generation of seamless, personalized onboard experiences.

92%

of parents say they are likely to travel with their children in the next year.

50%

of parents have delayed or avoided flying because they were worried about how their baby would sleep on a plane.

59%

of Americans cited parents with little or no control over children, as one of the most problematic passenger behaviors.

Meeting the unique sensory and emotional needs of traveling families is no longer optional—it is a direct lever for maintaining high customer satisfaction and securing long-term brand loyalty.

Reimagining Inflight Audio

	Standard IFE Strategy	The WhisperWings Sanctuary
Primary Goal	Active Distraction	Nervous System Regulation
The Voice	Synthetic, Loud, AI-Driven	Human (Ora), Warm, Gentle
Success Metric	Requires high cabin adoption to justify cost	Requires minimal adoption for maximum cabin benefit

Standard inflight entertainment requires high passenger adoption to prove its value. WhisperWings shifts this model. We do not need 100% of your passengers to tune in to be 100% effective.

A Whisper Can Become a World

Ultimately, when your airline proves it cares enough to design inflight experiences for growing families, you build a deep, emotional brand loyalty that spans generations.

Partner with us to turn stressful travel into a family tradition of wonderment.
