

Axle Counter Appreciation

Aim

This course will inform a signal engineer requiring an introduction to the engineering, design, installation, testing or maintenance of Axle counter systems.

Key Features

- The AzLM axle counter is chosen, being the most common UK application, but the principles equally apply to other types of axle counter.
- The course can be modified to suit specific equipment types and customer applications.
- Axle Counter system components
- Axle Counter Signalling Principles
- Axle Counter Circuitry
- Axle counter reset methods
- Overview of specific design, installation, testing & maintenance issues

Course Outcomes

On successful completion of this course, the delegate will be able to:

- Identify the components used in axle counter systems.
- Describe the relationships between axle counter system components
- Outline the operational and technical issues for physical and electrical system configuration
- Describe the different operational and technical methods of axle counter reset
- Outline specific design, installation, testing & maintenance requirements

Assessment and Certification

The delegate's attendance will be confirmed by a certificate which will be forwarded to the nominated client contact following the course.

Pre-Requisites

A well prepared delegate is expected to be familiar with signalling principles and engineering for conventional UK main line practice.

Practical Information

Duration: 2 Days

Location: Any

Maximum number of delegates: 10

This course is produced and run by Signet Solutions.

Course Progressions

We offer many signalling technical courses, and it can be difficult to work out what's best for your needs. The following table will assist you.

*Development Courses in green text

These courses typically form the backbone of a career development path, and are usually taken in the order shown.

Available on an "open" basis, in which you can take individual places from our regular timetable.

*Supplementary Courses in blue text

These courses provide supplementary knowledge about a specific technology or process. They can generally be taken on an "as needed" basis, without any particular order.

Available on a "private" basis, in which you sponsor the delivery of a full course. This works better for four or more delegates.

This is just a quick guide – please consult our individual course specifications for more detailed information. Please ask us if you have any queries.
