

Reporting and Analytics

Overview

Reporting & Analytics within the M5 platform provides structured visibility across operational data generated by enabled M5 modules.

It transforms operational activity into consumable insight by aggregating data across assets, users, and workflows, enabling organisations to monitor performance, manage compliance, and support informed decision-making using a consistent reporting framework.

The value and depth of reporting scales with module adoption, with combined datasets providing insight not available from isolated systems.

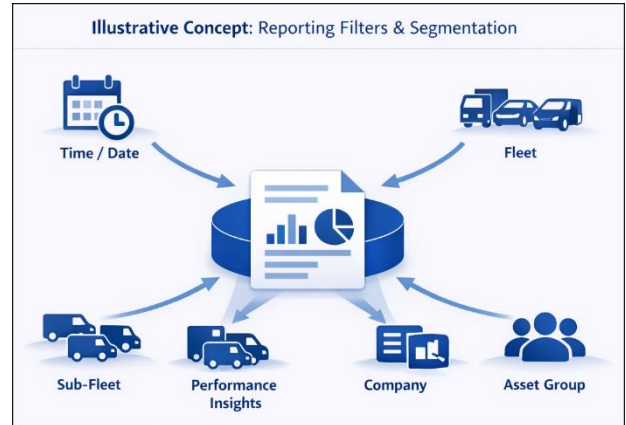

Key Objectives

- Provide consolidated visibility across fleet, asset, and operational activity.
- Enable data-driven decision-making using accurate, timely information.
- Support compliance, audit, and governance reporting requirements.
- Make operational performance measurable and comparable over time.

Core Functionality

- Pre-configured operational reports covering usage, inspections, servicing, compliance, fuel, and activity where corresponding modules are enabled.
- Cross-module data aggregation to provide insight from combined datasets rather than isolated views.
- Dashboard-style visualisation presenting key indicators, summaries, and trends.
- Filtering and segmentation by time period, date range, fleet, or sub-fleet.
- Power BI integration where configured, enabling advanced analytics and external visualisation without replacing M5 reporting.

Illustrative concept showing how data from multiple M5 modules is combined to produce reporting and analytics insight.

Outputs

- Operational reports providing visibility of day-to-day activity.
- Performance and trend reports supporting longitudinal analysis.
- Compliance and exception reports highlighting overdue, missing, or failed activities.
- Dashboards summarising key indicators across enabled modules.
- Power BI datasets where integration is enabled.

Decisions Enabled

- Identify operational and performance trends over time.
- Monitor compliance adherence and emerging risk areas.
- Compare activity and outcomes across assets, fleets, or business units.
- Prioritise improvement initiatives using evidence rather than anecdote.

Benefits

- Operational:
 - o Clear, consolidated visibility without manual collation of information.
- Compliance:
 - o Evidence-based reporting supporting audits, governance, and assurance.
- Commercial:
 - o Faster, more confident decision-making through measurable performance and trend visibility.

Dependencies / Assumptions

- Availability of reports and datasets depends on enabled M5 modules.
- Access to reports and dashboards is controlled through role-based permissions.
- Power BI integration requires appropriate configuration and licensing.
- Data refresh, retention, and governance follow platform configuration policies.

Dependencies / Assumptions

Reporting reflects data captured by the M5 platform and does not infer or estimate missing activity. Visual layouts are illustrative and configuration-dependent and must not be represented as fixed interfaces.
