

FLT Link

See every fixture from anywhere, and reach it from anywhere.

FLT Link pairs a cellular-connected controller with an FLT web portal, so fixtures report their own status from the field. City crews get a live map of every site, status on every fixture and diagnostic logs. All from your desk, without a truck roll just to check on a light.

Monitor

Check status, battery level and solar history from anywhere, and get alerted by email or text when a fixture needs attention.

Reconfigure

Adjust lighting profiles, dimming times and motion hold time on parks, medians and pathways without dispatching a crew.

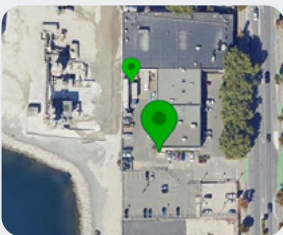

Control for events

Set a light operating profile for a parade, filming permit, or closed season, or shut fixtures off entirely. Set an end date and they revert automatically.

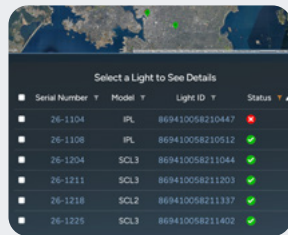

Full remote support from FLT

Firmware, diagnostic logs and the engineering level controller settings all reach the fixture over the air, so most support work needs no site visit.

Inside the Portal

Site map view. Every FLT fixture across your city, plotted and status-colored.

Site View. Serial number, model, and live status for each light on site.

Power diagnostics. Charge and usage history for troubleshooting from anywhere.

Fixture detail. Location, profile, firmware revision and manufacture date at a glance

Two levels of access

Your team map, status, history, lighting profiles/schedules, motion hold time, scheduled shutdowns, site-wide group changes, plus opt-in email/text alerts.

FLT support firmware deployment, full diagnostic/event record, ~40 engineering-level parameters. Nothing critical breaks by accident. Hard problems land on us.

How it's sold

Rolling out across all FLT solar lights, with the exception of our bollards. The controller ships in every eligible fixture whether or not monitoring is switched on, so a site can be equipped now and enabled on any timeline.

Link is an add-on subscription on top of the fixture. Your FLT contact can walk through pricing for a project of your size.

For a city managing lighting across dozens of sites, FLT Link means visibility into every fixture, without having to be on-site.
