Deliver Shared Operational Awareness

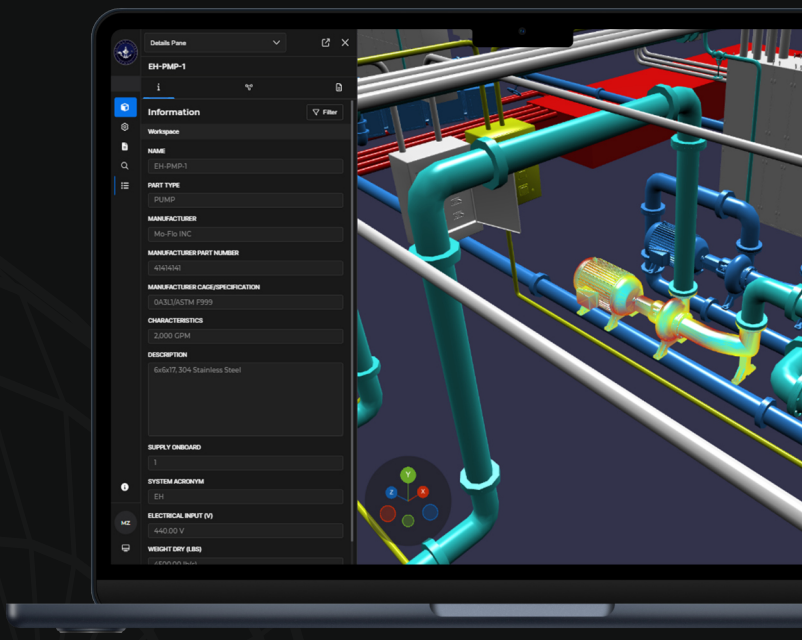

Beast Core connects existing systems and information into mission-focused software applications that deliver shared operational awareness, improve readiness, and accelerate decision making.

AGGREGATE

Connect What Already Exists

Modernize in place by connecting mission systems, technical data, engineering models, third-party applications, and operational information into a shared operational environment. Beast Core improves visibility across existing systems without requiring organizations to replace current tools or workflows.

Eliminate information silos and establish a common operational picture that enables informed decision-making.

SEARCH

Find Information Faster

Critical information is difficult to locate when users must navigate multiple applications and repositories. Beast Core provides a unified search experience that helps teams quickly access and understand the information they need from a single interface.

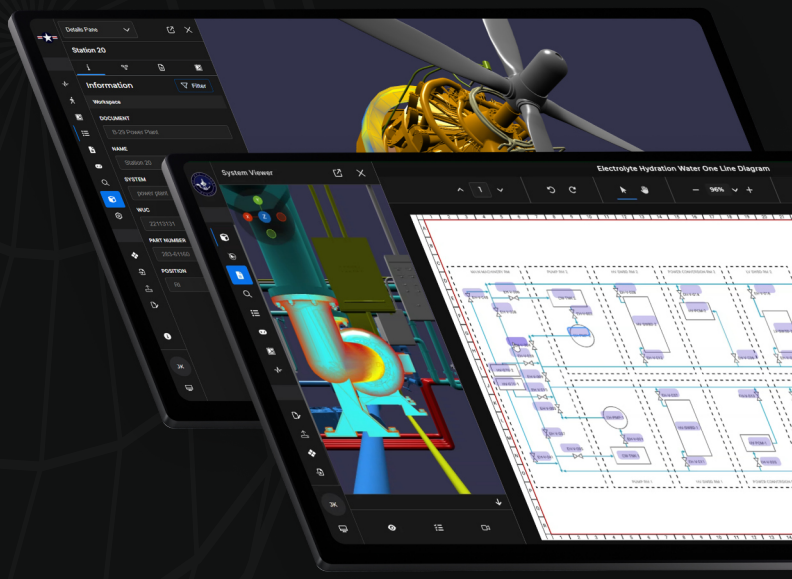

Create tailored views, filter results by mission relevance, and build decision-ready outputs.

CUSTOMIZE

Build Mission-Focused Applications

Every mission is different. Beast Core enables organizations to rapidly build workflows, dashboards, and decision-support tools tailored to operational requirements.

Extend capabilities and integrate with third-party applications while maintaining ownership of your data and avoiding vendor lock.

LEARN

Accelerate Knowledge

Transform technical and operational information into interactive learning experiences, digital walkthroughs, and mission-focused briefs that improve workforce readiness, accelerate time-to-proficiency, and preserve institutional knowledge.

Create and maintain content using a drag-and-drop authoring environment that keeps learning experiences synchronized with evolving systems, procedures, and mission requirements.

INTEGRATE

Bridge Engineering and Operations

Engineering information creates the greatest value when it remains connected to real-world operations and sustainment activities. Beast Core maintains traceability between Cameo SysML models, design artifacts, system configuration, and sustainment activities throughout the lifecycle of a system.

Enable engineers, maintainers, operators, and program offices to understand how decisions impact readiness and mission performance.

DEPLOY

Operate from Edge to Enterprise

Deploy Beast Core across cloud, on-premises, and mission-edge environments, including contested, degraded, and disconnected operations where access to trusted information matters most.

Support mission execution while maintaining security and flexibility across diverse government environments. Beast Core is license-free for government organizations and proven in ATO-authorized environments.
