### TECHGUARD SUPPLY CHAIN SECURE

#### OT / IoT Security for Warehouse Technology

Barcode scanners, handhelds, conveyor systems, automated picking tech - every connected device across your warehouse is discovered and assessed using passive, non-intrusive scanning. Vulnerabilities, default credentials, and unpatched firmware ranked by operational risk. Devices that cannot be patched are isolated and controlled at the network level.

✓ **Full OT/IoT asset inventory, risk register, and compensating control plan.**

#### Business Continuity for Peak Seasons

A disruption during Black Friday, Diwali, or end-of-quarter is not the same as a disruption in February. Single points of failure across routing dependencies, carrier integrations, and warehouse systems are stress-tested against real peak-season load profiles. A prioritised resilience plan is delivered before the next peak window.

✓ **Business continuity gap report with peak-season resilience roadmap.**

#### API Security for Partner Integrations

Every partner-facing API tested against the OWASP API Security Top 10 — covering broken authentication, object-level authorisation failures, excessive data exposure, and injection vectors. Integration attack surface mapped to identify where a compromised carrier or marketplace connection reaches into core order and routing systems.

✓ **OWASP-aligned API security assessment and partner integration risk report.**

#### Vendor Risk for Subcontractors & 3PL Partners

Structured third-party risk assessments across the 3PL and subcontractor network using a TPRM framework aligned to ISO 27001 and CERT-In guidelines — covering data access scope, contractual security obligations, and technical control validation. Each partner scored and tiered by risk, with remediation requirements assigned to those operating below your defined security baseline.

✓ **Scored vendor risk register with tiered remediation requirements.**

#### Sequel Logistics | Jul, 2024

Client & shipment data compromised across 22 secured hubs and 90+ towns. High-value cargo data exposed — jewellery, precious metals, banking clients.

**Entry:** DarkVault ransomware. Full network compromise confirmed.

50 GB stolen — contracts, manifests, client SLAs, employee PII. Every client's data exposed through one open port.

**Entry:** RDP port exposed. No MFA. LockBit walked in.

### Quick Self-Check

- Do you know which of your operational devices haven't been patched in over 12 months?
- Do your 3PL partners meet your security standards — and can you prove it?
- Can you detect if an order, address, or delivery route has been tampered with?
- Do you have a complete inventory of every connected device across your warehouses?

“No” = you have an open door

### Why TechGuard

- ◆ **Israeli Battle-tested cyber methodologies**  
ERA IT Consulting & Audit (est. 2008) + Ariel University partnership
- ◆ **Local Coimbatore team**  
On-site delivery — no international consultant travel costs
- ◆ **Supply Chain & IoT Expertise**  
Cybersecurity assessments built for fleet management, warehouse systems, customs-integrated platforms, and GPS-linked tracking
- ◆ **Legal compliance**  
DPDP Act and CERT-In compliance integrated into every engagement

## Cyber Resilience for Every Link in Supply Chain
