

Find the Value Your Due Diligence Can't See - at AI Speed.

Run decision-ready diligence on any target in days, not weeks – then use the same engine to capture value across your portfolio.

Challenges

Private equity firms are expected to move faster while uncovering deeper operational insight.

But traditional diligence:

- is expensive and time-intensive
- depends heavily on management interviews and access
- struggles to identify operational blind spots
- often misses operational, growth and efficiency opportunities
- rarely produces scalable post-deal value creation intelligence

Vitelis is like a Corporate MRI to Scan the Business

LLMs understand language. Vitelis understands profit. Our proprietary AI Business World Model – 425K+ KPIs across 11M validated causal pathways – runs an outside-in analysis of any target to surface:

- Operational risks and EBITDA gaps
- Cost, efficiency, and digital maturity gaps
- Growth and commercial underperformance
- Supplier and ecosystem exposure

From manual diligence to KPI-level evidence

Vitelis AI creates outside-in scans benchmarked against top performers and ideal-twin competitors. We surface gaps that no human team can.

Decision-ready In Days, Not Weeks

Every gap comes with quantified value, root causes, benchmark evidence, and a capture playbook — ready for the IC pre-deal and the operating team post-deal.

Faster Diligence. Broader Visibility

Run Vitelis before exclusivity, during diligence, or post-close. No integrations. No dependency on management-provided data.

One Platform Across the PE Lifecycle

The diligence diagnostic becomes the operating blueprint post-close: value creation, operational benchmarking, portfolio monitoring, AI prioritization, cost reduction, and growth acceleration.

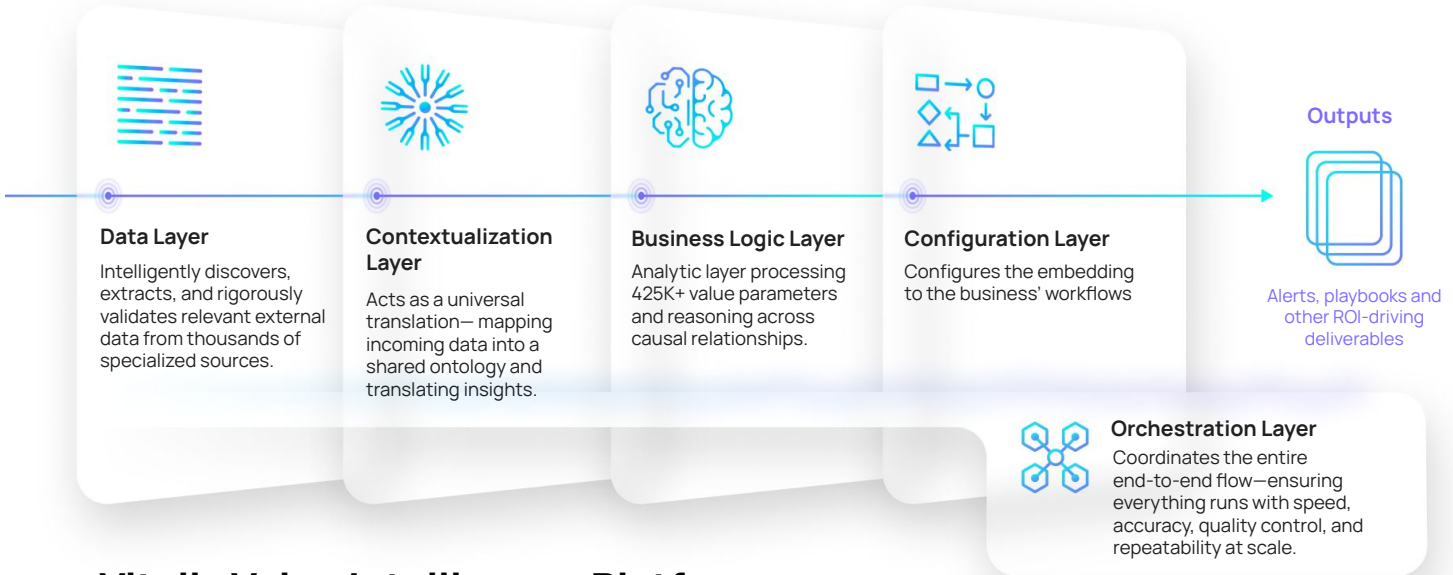

Don't Pay Twice

Gaps found after close cost you twice — a higher price paid, plus the investment to fix what you bought. Vitelis surfaces these gaps before signing, when they still move valuation and leverage.

How PEs Use Vitelis:

- **Accelerate diligence:** Compress cycles from weeks to days while expanding visibility into operational, commercial, and organizational risk.
- **Uncover hidden issues pre-acquisition:** Surface the operational, customer, supplier, and competitive gaps traditional diligence misses.
- **Identify growth levers:** Quantify revenue expansion, pricing, cross-sell, and market-expansion paths — with the playbooks to capture them.
- **Identify Cost & Efficiency Opportunities:** Benchmark operations against peers to identify cost reduction, sourcing, and productivity opportunities.

Vitelis Proprietary AI Business World Model: the engine of our platform

Vitelis Value Intelligence Platform

<p>See what others can't</p> <p>Uncovers and prioritizes hidden value opportunities.</p> <p>Identifies root causes, quantifies competitive gaps, and provides executable solutions.</p>	<p>Drives priority outcomes</p> <p>Aligns value intelligence directly to growth, efficiency, customer impact, and execution speed.</p>	<p>Provide clear paths to action</p> <p>Delivers execution playbooks, alerts, and reports to support direct action.</p>
<p>Highly accurate, external-first data</p> <p>Processes vast amounts of unstructured external data and distills it into structured, decision-ready intelligence. Data is verified for accuracy and auditable.</p>	<p>20X+ ROI and fast time to value</p> <p>Zero upfront investment. No data lift, no integration required. Generates immediate value with 15 pre-built analytic frameworks (eg, CX, Digital Maturity).</p>	<p>Flexible</p> <p>Configurable for internal data and frameworks. Outputs are fully customizable.</p>

Take the guesswork out of improving performance

Identify new growth opportunities, lost revenue and competitive gaps.
