

Turn Conservable Days Into Action (Not Noise)

When conservable days rise, leaders feel pressure to act.

Conservable days are acute inpatient days beyond what would be expected for comparable cases, pointing to potential efficiency opportunities. This signal is diluted by noise, making it difficult to prioritize where to intervene.

3terra's Conservable Days Module separates true opportunity from noise, so your team can focus on the populations and pathways where effort is most likely to deliver measurable improvement.

What Changes When You Use 3terra's Conservable Days Module:

- ✓ **Strong ROI:** 10–20% reduction in reported conservable days through data quality initiatives.
- ✓ **Opportunity ranking:** Identifies where conservable days are concentrated.
- ✓ **Impact view:** Quantifies financial and capacity implications.
- ✓ **Executive view:** On-demand visibility into conservable days, drivers, and priority populations.
- ✓ **Trend monitoring:** Tracks change over time to measure initiative impact.
- ✓ **Drill-ready reporting:** Enables review of specific populations and individual visits for chart, pathway, or operational follow-up.

BUSINESS IMPACT

- Faster identification of high-yield initiatives
- Better governance over improvement work
- Reduced reporting & analysis burden

FAST IMPLEMENTATION

- Implemented in days
- No additional IT lift
- Embedded within your existing reporting workflows
