

BACTERIAL REDUCTION THERAPY

WHAT MAKES IT DIFFERENT?

A regular cleaning is a preventative to avoid disease. Bacterial reduction therapy is therapeutic treatment in the presence of active disease.

PROCESS

1. The dentist or hygienist will examine the health of your gums and teeth to check for signs of gum disease or plaque buildup.

2. We use a combination of both lasers and air polishing to clean out and treat the bad bacteria.

3. This creates a gentle, non-invasive, more economical alternative to periodontal therapy.

**Severe or unresponsive cases may require referral to specialist*

YOUR ROLE IN RESTORING HEALTH

Your home care is essential for the success of your treatment.

Daily brushing and water flossing

Brush twice daily and use a water flosser to remove bacteria especially in inflamed areas.

Regular Follow-up visits

Consistent check ups and cleanings are crucial to monitor your progress and keep bacteria in check.

YOUR COMMITMENT

Periodontal treatment is a partnership between you and our team.

Together, with professional care, your home routine, and your body's immune response, we can restore your oral health.
