NOURISH PLUS RANGE: Farm Door sources regeneratively farmed, free-range and grass-fed ingredients where possible in our commitment to creating delicious, nourishing meals. Published research has found that pasture-raised eggs can contain higher levels of omega-3 fatty acids, Vitamin E, Vitamin A and naturally occurring carotenoids, alongside a more favourable omega-6 to omega-3 ratio compared with conventionally produced eggs. Studies have also shown that grass-fed beef may contain increased levels of omega-3s, antioxidants and beneficial fats such as CLA (conjugated linoleic acid), as well as minerals including iron and selenium. These nutrients can play important roles in supporting health, immunity and wellbeing.
