SAP® Solutions
SAP® Business ByDesign® solution and SAP ERP application

Japanese high-tech giant NEC adopted the SAP Business ByDesign solution to complement its SAP ERP application. Now it can implement a two-tier ERP model that captures end-to-end business management information for companies of all sizes along its supply chain.

Before: Challenges and Opportunities

- Capture business management information of more than 200 companies along the supply chain
- Ensure homogeneous global business management indicators by applying standard systems, rules, processes, and codes
- Deploy a business management platform to support the business of the entire group quickly and cost-effectively
- Share business information in a single consolidated platform across all group companies

Why SAP

- Attractive option to use cloud services from SAP to implement an entirely new two-tier ERP platform
- Compliance with standard systems, rules, processes, and codes implemented for the SAP ERP application

After: Value-Driven Results

- Enhanced governance with greater speed, lower costs, and standardized deployment
- Stronger decision making at all levels of the group
- End-to-end transparency along the entire supply chain
- Better support for business diversity thanks to the option to support both large and small entities
- Shorter group management cycle and more-accurate group results with the established SAP ERP application

“With the SAP ERP application already deployed at our head office and large-scale companies, it made sense to bring the SAP Business ByDesign solution on board. With both systems, we have all bases covered.”

Hiroshi Sudo, Senior Manager, Management Information Systems Division, NEC Corporation
