# Flexiroof modular shelters are:

## BEAUTIFUL

Clean, minimal design

Sleek architectural lines integrate seamlessly with your property, no matter the style of your existing architecture

Designed as a natural extension of your home for enjoyable indoor-outdoor flow

## FLEXIBLE

Customisable in length, width and pitch

Can be installed either freestanding or attached to your existing structure via a number of different connections

Structure available in 8 standard colours or can be custom powder-coated in 50+ Dulux colours to perfectly match your property

## FUNCTIONAL

Engineered specifically for New Zealand coastal, alpine and urban environments

Rated for New Zealand high wind zones (NZS 3604:2011) and up to 1.5 kPa snow loads

Constructed using ultra high quality materials and comes with a 10 year warranty

  
**Flexiroof**<sup>®</sup>  
Engineered for the elements

Flexiroof shelters are engineered using patented Thermassist technology, locking the polycarbonate sheet to the rafters using geometry and friction. This means the Flexiroof system does not rely on any degradable rubber or silicone parts.

Thermassist tech also allows Flexiroof to direct any heat stress from the structure into the sheeting, to dissipate through natural flexing of the sheet. So with Flexiroof, you don't get any cracking or popping noises when temperatures rise and fall.

## Flexiroof shelters offer an elegant solution to maximise your outdoor living space.

Modular Flexiroof shelters are completely customisable to your outdoor space, and can attach to your house with all kinds of connection options. Flexiroof offers inbuilt LED lighting and compatibility with drop-down blinds so you can create your ultimate outdoor living space. Flexiroof is 100% New Zealand owned and operated.
