

Flexicare

Your Flexiroof is built for New Zealand's weather — wind, sun, rain, even snow. With a little regular care, it will stay looking great and performing well for many years.

Cleaning Your Flexiroof

Polycarbonate Roof Sheets

To keep your roof clear and looking its best, give it a gentle clean every **3–6 months**:

1. **Rinse the roof** with clean water.
2. **Apply a mild detergent** using a soft hose attachment.
3. **Lightly wash** with a hose on mid-pressure for any stubborn spots.
4. **Wipe with a microfibre cloth or mop** to lift dust, pollen, and residue.
5. **Rinse well**, then use a **dry microfibre cloth** to remove water spots.

Helpful tips:

- Avoid abrasive scrubbing and high-pressure washing.
- Clean on a cool, overcast day — not in direct sun.
- You can use a *polycarbonate-safe awning spray* between cleans.
- If you notice bird droppings or heavy marks, rinse them off promptly to protect the sheet coating.

Aluminium Frame

To keep your frame looking fresh, clean it every **6–12 months**:

1. Use **mild detergent**, water, and a microfibre cloth.
2. For tougher marks, you can use **isopropyl alcohol or methylated spirits**, then rinse with clean water.
3. Avoid Harsh scrubbing and cleaning in temperatures above 25°C

Maintenance Tips

Your Flexiroof doesn't need much, but following these simple guidelines will help it last even longer:

- **Don't hang heavy items** from the structure.
 - In **high winds**, secure loose outdoor furniture so it doesn't hit the shelter.
 - **Avoid impacts** on the roof sheets or aluminium.
 - **Never walk on the roof sheets** or place weight on them during cleaning.
 - Keep up with the **regular cleaning schedule** for both the polycarbonate and the aluminium.
-

Important

To protect your shelter — and your warranty — please avoid:

- Petrochemical, abrasive, or citrus-based cleaners
- Brushes, pressure washers, or anything abrasive
- Spraying insect repellents on or near the shelter
