

WAREHOUSE MANAGEMENT SOFTWARE

ProVision WMS

By Ahearn & Soper Inc

Every pallet, every order,
every location.
All accounted for.

ProVision WMS gives 3PL and distribution operators real-time control of inventory, multi-client billing and pick accuracy. Deploy it in the cloud or on your own servers, supported by an Ahearn & Soper team our customers name individually in their reviews.

DEPLOYMENT

Cloud or on-premise

BUILT FOR

Distribution and 3PL

SUPPORTED BY

Ahearn & Soper, Canada

Nobody goes shopping for warehouse software. They call when one of these four things starts costing money.

01

You find out at your customer's dock

A mis-pick leaves the building looking correct. It comes back as a credit, a return shipment and a conversation about your reliability. The pick was wrong; the paperwork was not.

02

The count is right on screen and wrong on the floor

Stock exists in two places: the system and reality. Once those drift apart, every downstream decision is a guess, and the cycle count becomes a full-day exercise in reconciliation.

03

Storage and handling reconciled in a spreadsheet

Multi-client billing built by hand takes days a month, and every manual step is a place revenue quietly leaks. The activity happened. Whether it got invoiced is a separate question.

04

Someone has to walk the floor to answer a question

A customer asks where their order is and the answer takes twenty minutes and two people. Without a live position, the warehouse cannot answer for itself.

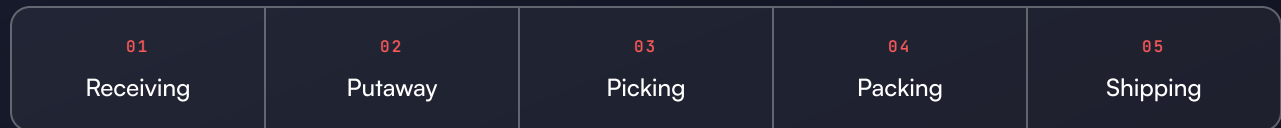

One system for warehouse operations. One partner accountable for making it work.

ProVision is Ahearn & Soper's family of supply chain software systems. ProVision WMS runs the warehouse. ProVision Labels and ProVision Automation extend it into labelling and automated execution. All three are designed, implemented and supported by **one Canadian partner**.

THE SAME CORE ENGINE

One flow, not five systems stitched together

All three ProVision solutions run the same core engine of receiving, putaway, picking, packing and shipping, with functionality layered on as the operation grows more complex.

ONE ENGINE

ONE DATA SET

READING OFF THE SAME DATA

Inventory

Real-time positions and multi-client segregation across customer accounts.

Billing

Account-specific billing rules, so no billable activity goes unrecorded.

Reporting

On-premise deployments query the database directly through Microsoft Office.

Modular app structure, with separate apps for assembly, billing, order and inventory management. Confirmed by customers in their own reviews.

What the system does on the floor

Every capability below is one Ahearn & Soper already publishes or a customer has confirmed in a verified review. Nothing here is a roadmap item.

- **Inventory control and visibility**

Real-time control of inventory positions, with multi-client segregation and visibility across every customer account in the building.

- **Receiving and putaway**

Directed receiving and putaway run on the same core engine as picking, packing and shipping, so stock becomes available to pick without a separate reconciliation step.

- **Directed and voice picking**

Directed picking as standard. Voice picking is included at the 3PL Advanced tier for operations running higher pick volumes.

- **Multi-client 3PL billing**

Customisable, client-specific billing rules included at the 3PL Advanced tier, replacing the monthly spreadsheet reconciliation entirely.

- **Assembly and work orders**

The Assembly module accepts a pick beyond what the work order calls for, returns surplus bill of materials to available stock on its own when a work order closes, and reverses everything picked but never consumed in one action.

- **RF and EDI**

RF device support on the floor and an EDI integration interface for trading partners. Both confirmed by customers in verified reviews.

- **Open integration**

Native connections across ERP, finance, ecommerce, carrier and integration platform systems. Anything not listed connects through the ProVision API.

- **No transactional ceiling**

Unlimited orders and SKUs with no transactional fees, and annual upgrades included with support.

Cloud when you want it. On-premise when you need it.

Most WMS platforms make you choose their infrastructure. ProVision does not. Run in the cloud for flexibility and lower up-front cost, or on your own servers for full data control and data residency. The same software and the same support team, either way.

SOLUTIONS

Three solutions. One right-sized system.

Three sizes, from single-site SME through to multi-client 3PL. All run the same core engine, with functionality layered on as the operation grows more complex.

ProVision 3PL Standard

SINGLE-SITE SME

3 to 8 RF users

- SaaS or on-premise, single or multi-site
- Advanced warehouse management functions
- Easy integration with ERP or ecommerce software
- Unlimited orders and SKUs
- Annual upgrades included with support

RECOMMENDED

ProVision 3PL Extended

GROWING 3PL

5 to 15 RF users

- SaaS or on-premise, single or multi-site
- User-accessible configuration changes
- Extended customer support
- Unlimited orders and SKUs, no transactional fees
- Path to multi-client billing at Advanced tier

ProVision 3PL Advanced

MULTI-CLIENT 3PL

5 to 50 RF users

- Multi-client warehouse management
- Voice picking
- Automated warehouse systems
- Customisable, client-specific billing included
- Single or multi-site, SaaS or on-premise
- Unlimited orders and SKUs, no transactional fees
- Extended customer support

Connects to the systems your operation already runs on.

ProVision WMS connects across ERP, finance, ecommerce, carrier and integration platform systems. Anything not listed connects through the ProVision API. Ahearn & Soper build and support the integration, so there is no third party in between.

ERP AND BUSINESS SYSTEMS

Microsoft Dynamics 365
SAP
Oracle
Infor
Epicor
IFS Applications
Acumatica
Workday
Sage Intacct

ACCOUNTING AND FINANCE

QuickBooks
FreshBooks
Zoho

ECOMMERCE AND MARKETPLACES

Shopify
Amazon
Walmart
BigCommerce
WooCommerce

SHIPPING AND CARRIERS

FedEx
UPS
DHL
EasyPost
Easyship
Shippo
ShipStation
Shipium

INTEGRATION PLATFORMS

Boomi
MuleSoft
Celigo
SnapLogic
Zapier

LOGISTICS AND FREIGHT

Flexport

ONE TEAM

Ahearn & Soper build the integration and support it afterwards.

OPEN API

Anything not named connects through the ProVision API.

This list reflects integrations available today rather than a closed or permanent set. New connections are added on a continuous cycle.

CUSTOMER RESULTS

What changes when operations switch to ProVision.

Three ProVision WMS customers, in their own words, on what moved after implementation. Every quote below is verbatim from a verified Google review.

PICK PERFORMANCE

“

Reduced our miss picked orders to 0 and reduced the amount of time it takes to pick orders immensely. We are now able to pick all of our orders for the day in 4 hours compared to the 8 hours it took prior to implementation.

0

MIS-PICKED
ORDERS

4 hrs

TO PICK A FULL
DAY, WAS 8

Rusty Hartzfeld

GOOGLE REVIEW, MAY 2024

“

Prior to Provision WMS we consistently could not find product in our warehouse. Now with Provision WMS, we know quantity and location of all our products. Sales order lead time has been reduced from 36–48 hours to often less than 24 hours.

Douglas Tanner

GOOGLE REVIEW, MAY 2024

Under 24 hrs

Sales order lead time, was 36 to 48

“

Worked with Enrico, Issam, and Dinah on implementing the Provision WMS at Techspan Industries. They are a full fledged solution which provide hardware, labels, software, and development services.

Usman Rafiq

TECHSPAN INDUSTRIES, GOOGLE REVIEW, MAY 2024

Four disciplines

Hardware, labels, software, development

4.9 ★★★★★ Average rating across 11 Google reviews
