

Behavior Frontiers
a world without limits

Why ABA Care Intensity Matters: Maximizing Developmental Outcomes in Autism

What the Data Shows:

In a study of over 340 children, those receiving 26–40 hours of ABA across all key developmental areas achieved:

- ✓ **+22 IQ points**
(vs. +11 with low hours)
- ✓ **+9 in adaptive skills**
(vs. +2)
- ✓ **-11 in autism severity**
(vs. -6)

Why It Matters:

High-intensity, comprehensive ABA is the most research-backed approach for achieving meaningful progress.

- ✓ More hours = more learning opportunities = faster, lasting results
- ✓ Early support helps close developmental gaps (ideally under age 6, but ABA helps at any age)
- ✓ Starting early maximizes long-term success

How Behavior Frontiers Goes Further:

Our proprietary platform, **PrioraCare™**, allows clinicians to track each child's progress in **real time** and adjust strategies immediately—leading to more meaningful growth, faster.
