Quality Engineered Roofing

Corpus Christi Monastery of the Poor Clares

Rockford, IL

Located in Rockford, Illinois, the Corpus Christi Monastery of the Poor Clares includes a beautiful chapel built in 1926, a brick enclosure wall, and multiple wings. The entire building is just under 10,000 sq ft.

In October of 2021, the Harrington & Sons Roofing and Construction team completed the installation of a multi-tone EnviroSlate roof on the monastery. The project used four colours of custom brown to emulate the tones of a natural slate roof. This material is one of the safest, most durable roofing products available. It installs with less waste than natural slate and it is 1/3 the weight.

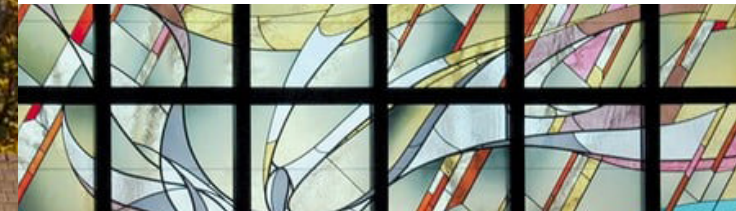

This EnviroSlate roof provides the peace of mind the comes with knowing that our product is maintenance free, strong enough to outperform nature, and covered by our Gold-Level Lifetime Warranty for up to 50 years. The stunning composite roof will retain its physical properties and appearance for many decades to come.

St. Elizabeth Ann Seton Parish

Ridgefield, CT

St. Elizabeth Church in Ridgefield, Connecticut, was built in 1979, in the shape of an equilateral cross. The main entrance is at the foot of the cross, with the main altar at the top which occupies the center of the elevated Sanctuary. The two wings of the cross contain pews seating about 400.

The Elite Construction Solutions team installed our Aged Cedar Enviroshake on the church, covering 14,000 sq ft. This product is the most authentic-looking shake roofing product on the market, featuring industry-leading durability and unsurpassed performance. The Aged Cedar tiles will weather over the course of the first year to reveal their beautiful weathered matte cedar look.
