THE PROBLEM

Most teams see only the post. They never see the full picture.

01 VISIBILITY

Detection that stops at text.

Threats live in TikTok audio, Reels video, and images that reference an executive without naming them. Keyword tools cannot see any of it. The most dangerous signals are the ones designed to evade text search.

02 CONTEXT

Fragments without a story.

A single post is not a threat assessment. Manual review across fragmented tools cannot tell a keyboard troll from a fixation pattern with escalation history. Teams read isolated signals.

03 RESPONSE

Travel and events outpace alerts.

Schedules are public. Venues are known. Adversaries organize online in the hours before. A 7 to 9 hour detection lag is not a monitoring gap. It is a security failure.

THE DIGITAL TRUST JOURNEY

From exposure to escalation, in minutes not hours.

STEP 01 →

See Every Surface

Multi-modal detection across text, video, audio, image. Social, fringe, dark web.

STEP 02 →

Map the Network

Autonomous agents trace the actor and connected infrastructure behind every signal.

STEP 03 →

Track Escalation

Growing dossiers flag fixation, tone shifts, follower growth, and proximity over time.

STEP 04 →

Alert with Context

Slack, Teams, email. Real-time alerts with original post and full attribution.

STEP 05 →

Protect the Person

Geo-aware monitoring tied to travel routes, venues, and event schedules.
