

Watchtower™

Digital Odorant Management Platform

Services: Operations, Risk Management | Industries: Gas Utilities, Renewable Natural Gas, Gas Refineries

Watchtower™ is MRR's digital odorant management platform, providing operators and utilities with real-time visibility into their odorization systems, documented operational records, and the data infrastructure needed to support regulatory compliance and performance reporting. Watchtower™ transforms odorization from a field activity tracked in paper logs into a managed program with data-supported decisions, automated documentation, and performance history available when auditors or regulators ask for it.

Key Capabilities

Platform Features	
Operational Visibility	Real-time visibility across enrolled odorization systems
Compliance Records	Documented operational records for compliance and audit readiness
Reporting	Performance reporting and trend data
Field Integration	Integration with MRR's field service and maintenance programs
AI Integration	Pickle.AI integration for intelligent data analysis
Access	Available to operators and utilities enrolled in the Harbour™ program

Why MRR

Watchtower™ was built to solve the documentation problem that follows reactive odorization management: when something goes wrong, the records that should tell the story of what happened aren't there. Watchtower™ builds that record continuously, automatically, and in a format that holds up when it needs to.

Contact MRR to learn about Watchtower™ and how it integrates with your odorization program.
