

Odorization Rental Equipment

Flexible. Compliant. Ready When You Need It.

Compliance doesn't pause for an outage. When permanent equipment is down for maintenance, delayed in delivery, or being replaced, gas still has to be odorized to specification, and the clock doesn't stop while you wait.

MRR rents odorant tanks and odorizer injection systems built specifically for odorization applications, and can install, integrate, and start them up as a turnkey scope. Rentals cover planned outages, system expansions, construction schedules, and short-notice emergencies, and can transition into a permanent installation when the temporary need becomes a long-term one.

Odorant Tank Rentals

MRR offers odorant tanks from 5 to 2,000 gallons, sized to match your demand and the runtime you need between service visits. Secondary containment is available with an optional weatherproof enclosure, protecting the site and the equipment for the duration of the rental.

Customer Value

- Tanks from 5 to 2,000 gallons, sized to match demand and runtime
- Secondary containment available with an optional weatherproof enclosure
- Every unit maintained, inspected, and ready for immediate deployment
- No capital spend for a temporary need

Odorizer Injection System Rentals

MRR rents odorizer injection systems covering gas flows from 0.001 to 38 MMSCFH at pressures up to 1,440 psi, compatible with virtually every injection configuration currently in the field, including bypass, custom, and site-specific arrangements.

Supported Injection Styles Include

- Bypass
- YZ
- Welker
- Dosodor
- Custom or site-specific configurations

Customer Value

- No need to redesign your process to fit the equipment
- Remote communication available via wireless modem, AC or solar powered
- Reduced operational risk during temporary or transitional periods
- Confidence that rental equipment performs like permanent assets

Specification, Installation & Start-Up

MRR does more than supply equipment. MRR helps specify and size the system for your application, installs and integrates it into your operation, and completes start-up so it performs correctly from day one. Odorant delivery, filtration, and transfer can be included in the same scope, backed by full general liability and environmental liability insurance.

Customer Value

- System specification and sizing support
- Installation and integration by MRR technicians
- Start-up completed before hand-off
- Backed by full general liability and environmental liability insurance

Emergency Response Rentals

Unplanned outages and equipment failures don't come with lead time. MRR can mobilize tanks and injection systems on short notice to restore compliance and keep gas flowing, with technicians who understand odorization systems in real-world field conditions rather than ideal ones.

Customer Value

- Rapid mobilization of tanks and injection systems on short notice
- Restores compliance and keeps gas flowing during unplanned outages
- Technicians experienced in real-world field conditions, not just ideal ones

Why MRR

- Rental equipment designed specifically for odorization applications
- Deep experience across all major injection technologies
- Safety-first approach backed by trained technicians
- Rentals convertible into permanent installations if the need becomes long-term

Keep Odorizing While Your System Waits

Whether you're planning an outage months out or dealing with a failure today, MRR can size, deliver, install, and start up temporary odorization equipment that keeps your system compliant, and convert it to a permanent installation if that's where it's headed.
