

Emergency Spill Response

Fast Response. Controlled Outcomes. Back to Safe Operations.

24-Hour Emergency Line: 1.844.900.1MRR

An odorant spill is an immediate event that demands a competent, equipped response. The first thirty minutes determine whether an incident becomes a contained operational problem or a public event with regulatory, community, and reputational consequences. MRR's emergency spill response service provides operators with access to trained technicians, specialized containment and neutralization equipment, and a structured response process built around safe, efficient incident resolution.

Response Capabilities

MRR's emergency spill response service includes:

Customer Value

- Rapid response deployment via 24-hour emergency line, anywhere in North America
- MRR-employed technicians trained to a standardized procedure in odorant handling, spill chemistry, and incident response
- On-site containment, absorption, and neutralization
- Environmental assessment and documentation support
- Coordination with regulatory notification requirements where applicable
- Post-incident reporting and remediation documentation

Why MRR

- MRR employs its own emergency response technicians
- Technicians are trained to a standardized procedure for odorant chemistry and emergency response
- Trained crews understand the regulatory implications of a release, not just the physical cleanup

Establish Your Response Agreement Before You Need It

Contact MRR to establish an emergency spill response agreement, so your team has a structured, equipped response ready before an incident happens.
