

Mercaptan Spill Kits

SK-085 — Everything Needed to Respond, In One Kit.

The MRR SK-085 spill kit contains everything needed to absorb, neutralize, containerize, and dispose of odorant-contaminated material after a mercaptan spill. A 55-gallon DOT/TC drum with liner holds contaminated soil, gravel, or parts without generating leak calls during temporary storage, while an all-season Deomer formulation neutralizes the odorant on contact and is effective to -20°C. PPE for two technicians, an epoxy repair kit for damaged equipment, and silicone sealant to prevent nuisance odors from a closed drum are all included. The whole kit ships in an 85-gallon plastic overpack rated to -20°C, so it can be stored outside year-round.

Actual PPE, disposal, and response requirements depend on site conditions and regulatory jurisdiction — confirm specifics for your site before relying on this kit as a complete response plan.

Kit Specifications

Weight	170 lb
Volume (overpack)	85 US gal
Diameter	30 in
Height	45 in
Rated spill capacity	Up to 1 gallon
Surface types	Soil, gravel, sand, concrete
Storage	Outdoor-rated, effective to -20°C

Contents

55-gal DOT/TC drum with liner · all-season Deomer neutralizer · PPE for two technicians · epoxy repair kit · silicone sealant

Applications

Mercaptan and odorant spill response at odorization stations, delivery and transfer sites, and any location where odorant handling equipment is serviced.
