

MRR Ballem Float Level Gauge

Accurate, Onsite Level Reading Without Electronics.

The MRR Ballem Float Level Gauge is a mechanical dip tape gauge that gives accurate, onsite odorant level readings without electronics or external power. A steel ball float is the only wetted moving part inside the tank, so there's little inside the vessel to wear out or fail. Stainless steel construction with no wetted soft goods gives it broad fluid compatibility, and it's custom sized to the tank it's installed on rather than sold as a fixed range of stock sizes.

Specifications

Rated pressure	Up to 750 psi
Power required	None — fully mechanical, no electronics or external power
Wetted moving parts	Steel ball float (the only one inside the tank)
Construction	Stainless steel, no wetted soft goods
Sizing	Custom sized to your tank — not sold as a fixed stock range

Applications

Level measurement on natural gas odorant tanks and other chemical storage tanks compatible with stainless steel construction. Standard equipment on MRR's own tank skids and odorizer product lines.
