

Committed to the Environment and Community

PxGeo is committed to protecting the environment, supporting communities, and delivering sustainable offshore operations with integrity and accountability. We recognize that our operations impact marine and coastal environments, and we strive to go beyond compliance to minimize these impacts while ensuring safe, efficient, and sustainable services.

Our Commitments

Responsible Operations

- Operate safely and efficiently to protect life at sea and optimize fleet performance through energy-efficient operations, preventative maintenance, and practices that reduce emissions, underwater noise, waste, and disturbance to marine life and ecosystems
- Uphold international standards for crew welfare and working conditions, including fair employment, safe manning, fatigue management, and humane living conditions.
- Engage and support local communities through proactive stakeholder engagement and targeted Corporate Social Responsibility initiatives.
- Apply innovative survey design optimization and enabling technologies to reduce vessel days at sea, emissions levels, and marine disturbance.
- Manage all subsea operations in line with best industry practices to prevent leaks, avoid spills, and safeguard sensitive marine environments.
- Minimize travel-related emissions by prioritizing digital collaboration and implementing efficient crew-change and logistics planning.
- Prevent pollution, minimize waste, and promote the responsible use of natural resources.

Regulatory Alignment & Continuous Improvement

- Meet or exceed all applicable environmental laws, maritime conventions, permit conditions, and client standards across all jurisdictions of operation
- Engage transparently with regulators, coastal States, and stakeholders to align with local and industry expectations.
- Support global frameworks, including the UN Sustainable Development Goals (SDGs), align with the Task Force on Climate-Related Financial Disclosures (TCFD), and disclose performance annually through the Carbon Disclosure Project (CDP) and other reporting platforms.
- Maintain and continually improve an Environmental Management System consistent ISO 14001 certification and contribute to industry best practices through active participation in recognized associations (EnerGeo Alliance, IMCA,...).

Climate Responsibility & Accountability

- Measure, monitor, and report greenhouse gas emissions, across relevant scopes, in accordance with global standards and ensure traceability of the underlying activity data and factors.
- Set and review annual targets for reducing emissions, waste generation, and water consumption, while driving continuous improvement through innovative practices and technologies.
- Assess climate-related risks and opportunities across our operations and supply chain, incorporating them into planning, risk management, and investment decisions.
- Disclose progress openly in Company sustainability reporting and client submissions, enabling stakeholder accountability.
