

AXIS designs and manufactures bespoke British-made steel-core entrance doors for your family home.

Our architectural freedom means there's no other door like yours. Security is built in, not added on.

Crafted with care to match your design standards, without ever compromising on safety. Designed to be loved for generations.

100% bespoke designs

There's no one-size-fits-all here.

Modern. Traditional. Classic. Contemporary. Your door is crafted based on your detailed preferences. We never use pre-made designs.

We create your vision from the ground up: hardware, locking system, panelling, milling pattern, glazing, finish – right down to the details people don't think they notice.

Exquisite, enduring quality

Doors that help
define your legacy.

Built to order in Britain using reinforced steel fabrication, tailored milling patterns, and specialist craftsmanship. We design the threshold that people associate with your business, or the front door your family will see as home.

We use only premium materials and expert techniques to design doors that slide effortlessly into their surroundings, adding the finishing touch to your entranceway.

Security is structural

We'll make the last door you'll ever need.

Reinforced steel cores, multi-point locking systems, fingerprint access, and bulletproof layers are just some of the security features we offer to those who need more than basic security. Every door is manufactured to recognised security and quality standards.

We build your safety into the core. Understated and uncompromising.

*Dedicated
to you*

We don't just make
good first impressions.

We're with you for the long haul. From private design consultation through to detailed survey, professional installation, and ongoing aftercare, every project receives dedicated support.

When you work with AXIS, you
make a partnership for life.
Our service is as tailored as
the door we build for you.

How it all works

Luxury door architecture as
unique as the life behind it.

Fully dedicated support, door-to-door.
From consultation to installation and beyond.

01

Design Consultation

Where your unique design starts to take shape.

- Private consultation
- Review of preferences and property
- Walkthrough of styles, finishes, and ironmongery
- Physical samples shown
- Design guidance provided

02

Quote & Survey

We provide an exact cost with full transparency.

- Detailed site survey
- Accurate measurements
- Structural considerations assessed
- Comprehensive quote with specifications

03

Manufacturing

Completed in 10–12 weeks, including installation.

- CAD design engineering & CNC wood and steel processing
- Precision fabrication and bespoke joinery
- Controlled finishing and spray painting
- A combination of advanced machinery and skilled craftsmanship
- Optional protective wrapping service during the construction phase

04 05

Installation

Your finished result,
installed to last.

- Installed by experienced professionals
- Precise fit
- Property left secure and clean
- Focus on performance and longevity

Aftercare

Where your unique design
starts to take shape.

- Clear maintenance guidance
- Skilled technicians available

Bespoke Security Doors

Luxury door architecture as
unique as the life behind it.

Grade 3 Security Doors

For high-value homes with elegance.

For adding aesthetics and security to private residences, apartment complexes, and commercial spaces. Our Grade 3 security doors combine advanced protection with bespoke design.

Built with a multi-point, four-directional locking system as standard, they provide reinforced security against forced entry. These doors offer exceptional durability, thermal insulation, and acoustic performance. Custom finishes, premium materials, and limitless design possibilities mean our Grade 3 doors align with your architectural vision, without compromise.

- Reinforced galvanised steel frame with 1.5mm internal steel shield
- Four directional 11 locking bolts as standard
- Internal steel stiffeners for added structural rigidity
- Premium-grade stainless steel threshold with dual rubber seals for enhanced airtightness

Grade 4 & Bulletproof Doors

For more than peace of mind.

For high-security environments such as luxury residences, embassies, high-risk commercial properties, and government buildings. Our Grade 4 and Bulletproof doors are crafted for flawless operation and exceptional resistance against extreme forced-entry attempts. We incorporate high-grade structural reinforcements, optional bulletproof steel layers, and multi-point locking systems to keep you safe at all costs.

Built-in security allows us complete freedom in the look and feel of your door. Bespoke aesthetics, premium finishes, and skilled craftsmanship mean your design options are virtually limitless.

- Double “L” shape reinforced frame crafted from 2mm steel, with built-in insulation, internal and external architraves. 115mm steel profile
- Internal Umidax/Medite Tricoya board
- Additional metal 1.5mm / bulletproof sheet
- Optional additional locking points (same or separate key)

Pivot Security Doors

For when you want to make a statement

For grand entrances and contemporary spaces that feel different and want to be noticed. Our security pivot doors rely on heavy-duty pivot hinges, to provide exceptional durability and protection. The aesthetics can also be refined to your liking, with fully customisable sizes, materials, finishes, and detailing.

As always, our stunning designs never compromise on security. Built with a reinforced galvanised steel structure, a multi-point, three-directional locking system, and heavy-duty pivot hinges, our pivot doors provide the same exceptional durability and protection as any AXIS design.

- Precision-welded galvanised steel profiles with an added cross stiffener for maximum strength and rigidity
- Three-directional multi-point locking system ensures superior security
- The reinforced single “L” frame, made from 2mm galvanised steel, ensures exceptional strength, security, and longevity.
- The internal board enhancing the door’s strength, moisture resistance, and fire protection.

Security Door Glazing

A finishing touch of
total security

To ensure our glazing meets the same high-security standards as our doors, we use triple-glazed, triple-laminated glass as standard, paired with a robust 44mm profile. The outer layer is made from P6B security glass, offering excellent impact resistance and protection. For specific project requirements, this can be adjusted to standard glass without altering the door's visual appearance.

We offer glazing configurations to suit any design, whether within the door itself or as side and top panels.

- Laminated interlayers designed to resist shattering and hold fragments in place
- Multi-layer construction engineered against forced-entry attempts
- Security glazing specified to align with the structural rating of the door
- Designed to maintain visual consistency while meeting security requirements

Locking Systems

The hardware concealed in
the seamless finish.

668G/GF mechanical lock

free-moving handle

668G/GF mechanical lock:

Our security doors are equipped with the most advanced locking systems available, sourced from leading manufacturers worldwide. We use cutting-edge technology and superior mechanical strength to design locks with unmatched protection and reliability.

The 668 G/GF is a high-performance mechanical lock designed for armored security doors, offering enhanced security, durability and efficiency. Part of the series 600 mechanical lock range, it features a free-moving handle that prevents accidental latch retraction when the deadbolt is engaged.

EKey dLine biometric fingerprint scanner

EKey dLine biometric fingerprint scanner:

The eKey dLine fingerprint scanner transforms your front door into a smart access system using advanced biometric technology. No more worrying about lost keys or forgotten codes.

Designed for modern living, the ekey dLine adapts to users over time, making access intuitive and reliable. It recognises children's growing fingerprints, works despite minor injuries or dirt, and offers convenient access for the whole family. Its sleek, modern design blends seamlessly into the door for a harmonious balance of security, style, and cutting-edge innovation.

X1R Smart Lock:

X1R Smart lock engineered specifically for armoured security doors. It integrates the strength of a mechanical lock with the versatility of electronic access control, offering operation via smartphone, RFID tag, or keypad.

For effortless access, the lock features motorised opening and automatic closing, managed by an advanced next-generation microprocessor. In emergency scenarios, the system provides full mechanical backup – allowing deadbolt operation with a traditional key – while an intelligent security mechanism automatically disengages motorisation when the mechanical cylinder is in use.

X1R Smart Lock

Mottura 85.ELE SERIES:

The Mottura Elle lock is engineered for high-security applications, such as main residential entrances. Designed to maximise door security, it guarantees reliable protection even when the deadbolts are not engaged, a common scenario in buildings where doors close automatically via a door closer.

For further convenience, the lock is equipped with an electric strike, allowing residents to remotely unlock the door using internal intercom systems. This combination of safety and ease of use makes Mottura Elle a trusted solution for multi-occupancy buildings.

Mottura 85.ELE SERIES

Milling & Design Options

Your bespoke door lies in
the finer details.

Timeless heritage styles to modern innovative looks. Our milling patterns are what give our doors their unique edge and let them slip into the architecture of your home.

We offer a range of expertly crafted milling patterns as part of our standard selection. If you're seeking something truly unique and tailored, we offer fully bespoke milling options crafted to your exact specifications. We offer the following standard patterns:

VICTORIAN

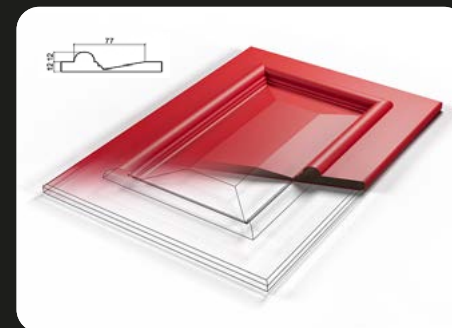

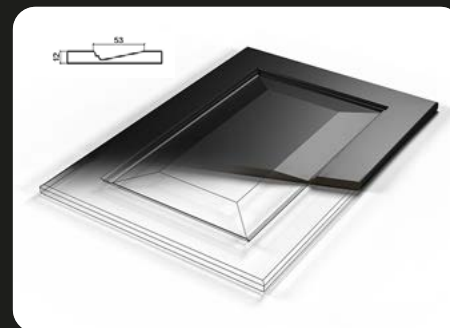

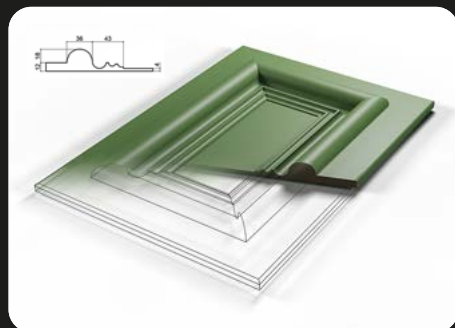

REGENCY

GEORGIAN

GEORGIAN MOULDINGS

KENSINGTON

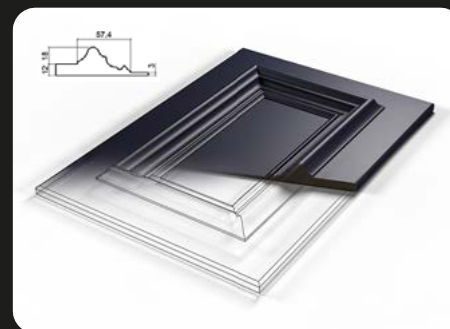

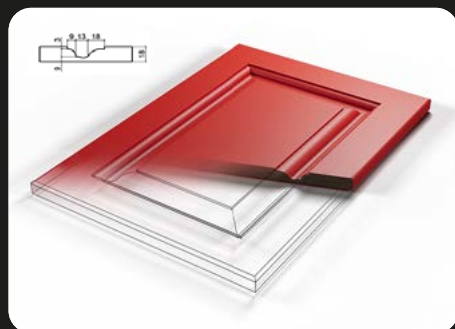

COTTAGE

EDWARDIAN

HALF MOON

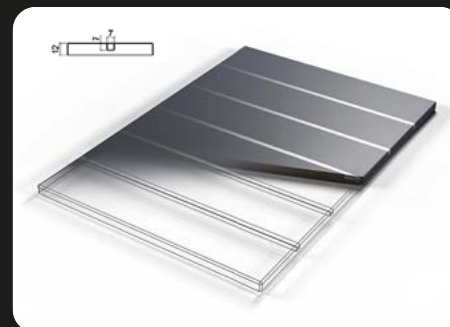

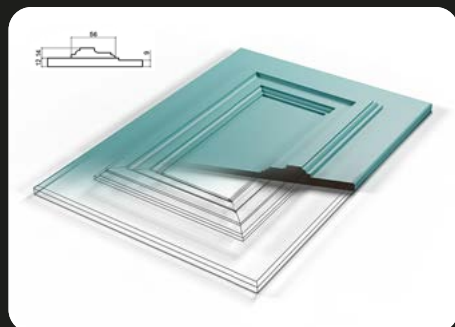

ROMANIAN

V GROOVE

AL INLAY

Your questions answered.

We answer your questions here. If you have a question we don't cover, get in touch, and we'll help you out.

What makes an AXIS door different?

All AXIS doors are fully bespoke and not restricted to a standard system or catalogue design. Each door is built around a solid steel core (resistant to forced entry and with a multi-point locking system), with timber cladding that allows complete architectural freedom. Security is structural rather than added later, and every project includes an in-depth design consultation, professional installation, and aftercare support.

How secure are AXIS doors?

Security is central to each door's construction, not an add-on, for homeowners who want serious security, not just peace of mind. AXIS doors are engineered around a welded steel core with structures that include internal steel stiffeners, a reinforced galvanised steel frame, and integrated multi-point locking.

How much maintenance is required?

No structural maintenance is required for the steel core or cladding, which lasts for years to come. We recommend cleaning using a microfibre cloth and a suitable spray solution. Moving parts, such as hinges and locking components, should be lubricated approximately every two years, depending on usage.

What about aftercare?

Aftercare is part of the AXIS service. Our clients receive clear maintenance guidance, and support remains available after installation. If repairs are needed, our skilled technicians can assist you. A protective wrapping service is also available for doors installed during ongoing construction projects.

We're AXIS Doors

We're a team of accredited, highly skilled experts who will make the last door you'll ever need.

AXIS is a residential-focused security door brand built on precision engineering, skilled artistry, and customer service that carries you from initial quote to well after your door's been installed.

Our manufacturing partner is an experienced UK security door specialist with industry expertise dating back to 2003. Based just outside of London, they have achieved ISO 9001 certification within the first year and manufacture Grade 3, Grade 4, and bullet-resistant doors in Britain. They have now expanded to over 50 team members and moved into a larger facility in 2024 to accommodate their continued growth.

British craftsmanship
and certified peace of mind.
