9 Reasons to Switch to Virtual Instructor-Led Training

Find out where the productivity improvement comes from when instructors switch to virtual instructor-led training, and the operational changes that make it stick.

1 More productive instructors

For a 1-day traditional training course, Daniel spends 2 days traveling. With VILT, Daniel can spend those 2 days instructing instead of traveling, resulting in more students trained and more training revenue, while reducing training delivery costs.

2 No airline transportation costs

No flights. Instructors and learners join the class from wherever they already are.

3 No hotel costs

No hotel nights. Nobody has to stay overnight to attend a class.

4 No per diem expenses

No per diem. There are no meals, local travel or miscellaneous trip expenses to cover.

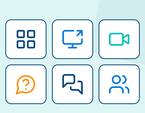

5 No lab setup costs

No shipping lab hardware. There are no crated laptops to send to a training center and set up.

6 VILT mimics real-life classrooms

VILT tools can mimic a real-life classroom, making it easy for instructors to provide engaging learning experiences: thumbnail view, take or share control, audio and video, a help request queue, public and private chat, screen sharing, breakout groups, polls and surveys, and inactivity alerts.

7 Hybrid training

Blending VILT and in-person training is effective and efficient.

8 No installs or plug-ins

Learners join from a standard internet connection and a web browser, with no installs or plug-ins.

9 Lower carbon footprint

Less travel means lower travel emissions.
