Why Students Like Virtual Training

In-person vs. online training from the learner's side: the five reasons students prefer virtual training, and what that means for your program.

1 Convenient and flexible

Traveling to training means time spent commuting, not sleeping in your own bed, lost luggage, delayed flights, missed connections and missed home events. Travel disrupts sleep and routine, which costs learners focus and productivity. VILT offers convenience and flexibility: students can attend courses from home, with no travel and none of its inconveniences.

2 Free to choose curriculum

In person, students are typically forced to sit through the entire curriculum when they only need to learn how to use a specific feature or subject, and travel can take up to a full day each way, time they are unavailable for actual work. With VILT, it is easier for students to select which sections of the course to focus on and which to skip, allowing them to stay more productive at work.

3 Robust student engagement

Virtual instructor-led training (VILT) software has features like thumbnail view, take or share control and breakout groups to help students have a more engaging learning experience. Students can ask instructors questions, perform exercises on hands-on labs, speak to classmates, and more.

4 Instructors take or share control

VILT offers students hands-on interaction with instructors. Instructors can take control of a student's lab and answer questions, mirroring the face-to-face interaction in an in-person class. To the student, it's as if they are in the same room as the instructor.

5 Lower attendance costs

The cost of in-person training is directly related to flights, hotels, per diem and the negative impact on productivity. Virtual training removes flights, hotels and per diem from the cost of attending, and students can participate from anywhere with an internet connection.
