

CASE STUDY

**Enabling a Secure Foundation for AI
Innovation**

As organizations look to unlock the value of Microsoft Copilot and AI agents, security and governance must come first. Red X Carbon is working with Humber River Health to strengthen its Microsoft 365 security posture and establish the controls, visibility, and governance required to support the safe adoption of AI-powered solutions.

By focusing on identity security, data protection, access governance, and AI readiness, Humber River Hospital is building a secure foundation that enables innovation while protecting sensitive information. This approach helps ensure that future Microsoft Copilot and AI agent initiatives can be deployed with confidence, supported by the proper guardrails, oversight, and security controls.

Key Focus Areas

- Microsoft 365 Security & Governance
- Identity and Access Management
- Data Protection & Information Security
- AI Readiness Assessment
- Secure Microsoft Copilot Adoption
- Agent Governance & Risk Management

Outcome

Through a security-first approach, Humber River Hospital is preparing its environment for the next generation of AI-enabled productivity, creating a foundation where Microsoft Copilot and AI agents can deliver value while maintaining compliance, security, and operational control.

Red X Carbon specializes in Microsoft Cloud, AI, cybersecurity, and managed services, helping organizations adopt emerging technologies securely while driving measurable business outcomes.
