

TT NZ SHELTERS

BUS SHELTERS

Shelters that earn their place on the street.

NZ SHELTERS WATERLEA GROUP LTD [NZSHELTERS.CO.NZ](https://nzshelters.co.nz)

WHO WE ARE

NZ Shelters designs, manufactures and installs aluminium bus shelters for councils and transport operators throughout New Zealand, from standard stops to high-use interchanges, and custom solutions for challenging sites.

We manage the complete delivery process, from initial site review and design through to manufacture, installation and handover. Our practical, responsive approach helps us work around the realities of each location, including constrained footpaths, underground services, difficult ground conditions and restricted site access.

The business was established in the early 2000s by Chris and Sheree Abraham, who developed the original shelter range. Today, NZ Shelters is owned and operated by the Cottle family, who remain directly involved in its day-to-day operation. That means clear communication, direct accountability and consistently high standards from the first conversation through to installation.

Custom designs available on request.

STANDARD WIDTHS, PRE-ENGINEERED

The standard width options are pre-engineered, which means fast turnaround times and minimised design fees. Custom widths and depths are available.

2.6m STANDARD Popular for tight sites	3.2m MOST POPULAR Council standard	3.8m WIDER COVERAGE High-volume stops	5.2m LARGE-FORMAT Largest standard offering
--	---	--	--

CLADDING OPTIONS

The right choice depends on the site and your maintenance expectations. Panels are riveted, so a damaged section is swapped on site and the frame stays.

FULL GLASS 10.38mm laminated safety glass throughout. Open, light feel with full visibility. Most common in town centres and transport hubs where vandalism risk is low.	PERFORATED PANELS Perforated aluminium throughout. No glass to break. Solid weather protection with visibility through. Best for remote or high-vandalism sites.	COMBO Perforated aluminium lower, glass upper. Glass keeps sight lines clear for passengers watching for the bus; panels take the wear lower down.

REFERENCE PROJECTS

CHRISTCHURCH AIRPORT

LOCATION	Christchurch
MODEL	Overhung, three shelters
SIZE	5.2m wide x 2.0m deep each
GLAZING	Full-height laminated glass

WAIKATO DISTRICT COUNCIL

LOCATION	Whatawhata
MODEL	Slimline, two shelters
SIZE	3.8m wide, 800mm deep with 600mm overhang
GLAZING	Perforated aluminium panels

WHANGĀREI DISTRICT COUNCIL

LOCATION	Maunu, Whangārei
MODEL	Open Front
SIZE	3.2m wide x 1.4m deep
GLAZING	Perforated aluminium panels

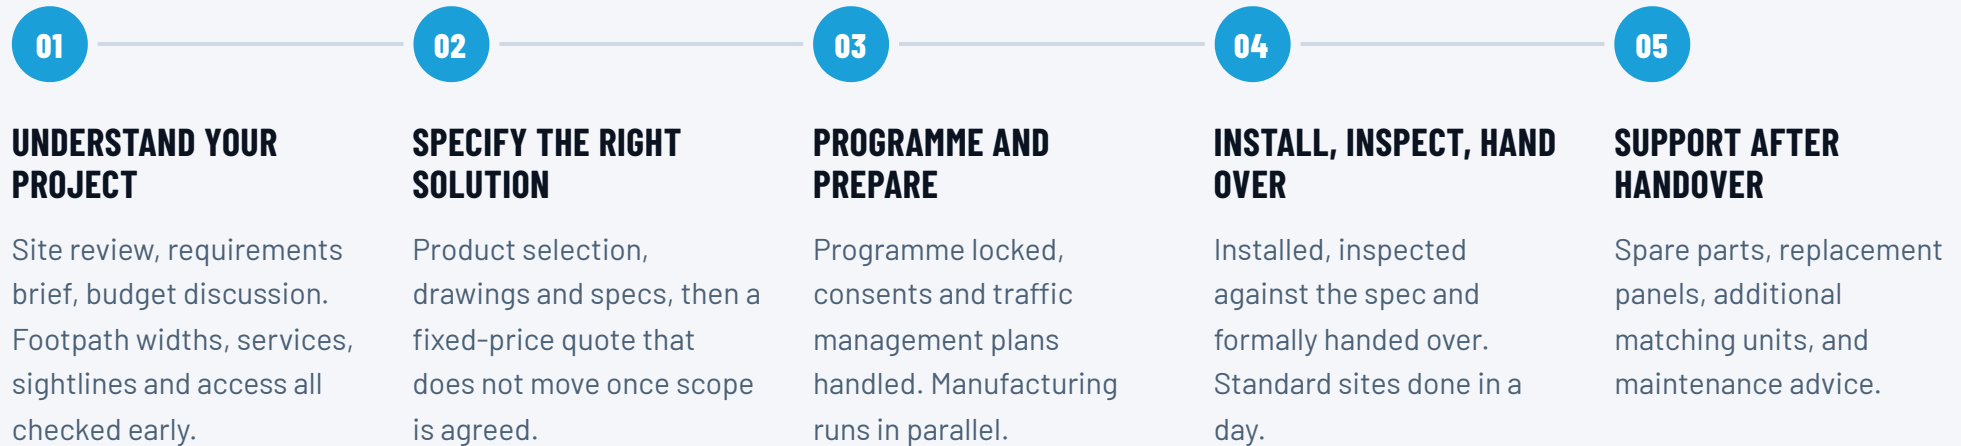

SLIMLINE 5.2M, KAIAPOI

Narrow footprint to keep the footpath clear, solar panel powering the information display.

NEW SHELTERS: HOW WE WORK

Every project runs the same five step process, so delivery and quality stay consistent whether it is one stop or forty. Full detail at nzshelters.co.nz/how-we-work

MAINTENANCE AND DURABILITY

Aluminium frames, powder coated finish, no structural steel to rust out.

BUILT TO LAST

Engineered to AS/NZS 1170.2:2021 wind loading, in line with the New Zealand Building Code.

Hard powder coat takes cleaning and graffiti removal without stripping back.

VANDALISM AND DAMAGE

Perforated aluminium panels available for stops with repeat glass breakage.

Structural audits on request, or after minor damage and vehicle collisions.

REPAIRED, NOT REPLACED

Riveted construction, so a damaged panel is swapped on site and the frame stays.

Spare parts and replacement glazing held locally.

ONGOING UPKEEP

Regular cleaning is all that is needed to keep framing and glazing looking new.

Bolt-down base plates, so a shelter can be lifted and relocated if a stop moves.

RENEWALS

REPLACEMENTS AND RENEWALS

Renewal work has different pressures to a new build: the stop is already in service, the site is tight, and the network has an established look.

MINIMAL DISRUPTION

In and out in a day on standard swaps, with no extended lane or footpath closures. Traffic management planning and implementation is included.

CONSISTENT WITH THE NETWORK

Powder coated to your palette and matched to your existing shelter units.

EXISTING FOUNDATIONS REUSED

Where the existing base and hardstand are compliant to our engineering standards, we can reuse them. We can handle removal and replacement where they aren't suitable.

OLD STRUCTURES REMOVED

We remove and dispose of damaged or end-of-life shelters as part of the job.

DELIVERY

Useful information for the delivery of your bus shelters.

LEAD TIME

4-6 weeks

Standard units, order to install. Can be compressed where a programme requires it.

PLANNING

Traffic management plans and consents

We prepare and lodge the approvals your site needs.

FOUNDATION OPTIONS

Concrete slab, pier footings or strip footings

Selected to suit ground conditions and services at each site.

INSTALLATION

Managed by us, anywhere in New Zealand

We handle traffic management on site, with a standardised safe process every time.

COMPLIANCE

AS/NZS 1170.2:2021

Rated to High Wind Zone nationwide. Site-specific engineering available for higher wind zones.

WARRANTY

5 years structural / 1 year workmanship

Full warranty terms apply.

DURABILITY

Aluminium frame, powder coat finish

No structural steel to rust out. Parts available well beyond the warranty period.

THE WIDER RANGE

Other standard products we build, alongside the bus shelter range.

NEXT STEPS

01 QUOTE A BATCH

Pick a handful of stops, new or due for renewal, and we will price the work.

02 SUPPLIER LIST

Tell us what your organisation needs from us to sit on the approved supplier list.

03 SITE VISIT

We will walk difficult sites with you and confirm what will physically fit.

WE LOOK FORWARD TO WORKING WITH YOU.
