

Π NZ SHELTERS

CUSTOM SHELTERS

Designed and built to cover people wherever they wait, walk or gather.

NZ SHELTERS WATERLEA GROUP LTD NZSHELTERS.CO.NZ

WHO WE ARE

NZ Shelters designs, manufactures and installs shelters and covered structures throughout New Zealand. Schools and universities, hospitals and aged care, councils and transport operators, developers, commercial and industrial sites.

Our standard ranges cover bus and workplace shelters. Beyond those, we design custom structures to suit the site: covered walkways, waiting and pickup shelters, canopies, and large engineered shelters that need specific design and building consent. Aluminium is our speciality, with steel and mixed material structures available where a project calls for it.

We manage the complete process, from site review and design through to manufacture, installation and handover. The business was established in the early 2000s and is today owned and operated by the Cottle family, who remain directly involved day to day. That means clear communication, direct accountability and consistently high standards from the first conversation through to installation.

SECTORS

WHO WE WORK WITH

Any organisation that needs people kept dry and safe outdoors, whether they are waiting, walking between buildings or gathering. Common examples:

EDUCATION

Schools, universities and early learning centres. Covered walkways, pickup and waiting shelters, and cycle parking.

HEALTH AND AGED CARE

Hospitals, clinics and retirement villages. Covered entries and drop-off areas, staff smoking shelters and sheltered seating.

COUNCILS AND TRANSPORT

Bus shelters, park and ride facilities and transport interchanges, from a single stop to a network rollout.

DEVELOPERS, COMMERCIAL AND INDUSTRIAL

Covered links between buildings, cycle parking, smoking areas and muster points.

OPTIONS

WHAT WE CAN CUSTOMISE

SIZE AND SHAPE

Any length and depth to suit your requirements.

ROOF FORM

Monopitch or curved roofs, chosen to suit the setting and the buildings around it.

CLADDING AND SCREENING

Glass, perforated aluminium or both, in any layout: full height, partial, or mixed panel by panel to suit the site.

SEATING

Built-in benches, perimeter seating, or a clear floor for standing room.

COLOUR

Powder coated to your palette at manufacture.

SIGNAGE AND LIGHTING

Panels for wayfinding, maps or branding, and lighting where the shelter is used after dark.

MATERIALS

Aluminium is our speciality for its minimal maintenance, with steel or mixed structures where required.

ENGINEERING AND CONSENT

Specific engineering design and building consent documents where required.

COVERED WALKWAYS AND WAITING AREAS

Covered walkways, waiting shelters and other custom structures, standalone or linked together, designed around where people walk, wait and gather.

BUS AND WORKPLACE SHELTERS

Our standard shelters are in daily use with councils, transport operators and businesses around New Zealand. They are modular and quick to install, with glass, perforated aluminium or combination cladding, powder coated in a colour to suit the site.

BUS SHELTERS

Roadside and interchange shelters for councils and transport operators, with seating and a choice of cladding.

SMOKING AND VAPING

A defined area set away from doors and air intakes, kept open so air moves through.

SHUTTLE AND STAFF TRANSPORT

Covered waiting for airport shuttles, park and ride and staff transport pickups.

LARGER SHELTERS

Wider and deeper units for busier stops and group waiting areas.

HOW WE WORK

Every project runs the same five step process, so delivery and quality stay consistent whether it is a single shelter or a fully engineered custom structure. Full detail at nzshelters.co.nz/how-we-work

01

UNDERSTAND YOUR PROJECT

Site review, requirements brief, budget discussion. Access, services and how people will use the space, all checked early.

02

SPECIFY THE RIGHT SOLUTION

Concept design and an indicative price, then drawings, specs and a fixed-price quote that does not move once scope is agreed.

03

PROGRAMME AND PREPARE

Programme locked around your site, with specific engineering and building consent handled where the structure needs them.

04

INSTALL, INSPECT, HAND OVER

Installed by our crews nationwide, inspected against the spec and formally handed over.

05

SUPPORT AFTER HANDOVER

Spare parts, replacement panels, additional matching units, and maintenance advice.

DELIVERY

Useful information for the delivery of your custom shelters.

LEAD TIME

Confirmed in your proposal

Set by the design, engineering and consent the structure needs. Standard units are 4–6 weeks, order to install.

SITE ACCESS

Inductions, permits and SSSP

Installation teams work to your site rules. Documentation provided ahead of mobilisation.

FOUNDATION OPTIONS

Concrete slab, pier footings or strip footings

Selected to suit ground conditions and services, and specifically engineered where the structure requires it.

INSTALLATION

Managed by us, anywhere in New Zealand

Our crews work to one standardised process, with site safety planned before we arrive.

COMPLIANCE

AS/NZS 1170.2:2021

Engineered for wind loading, with specific engineering design and building consent documents where required.

DURABILITY

Aluminium frame, powder coat finish

Steel or mixed structures where required. Spare parts available long after installation.
