

MORPHO BY TOMORROWLAND

Care & Maintenance

Crafted with exceptional materials, the Morpho by Tomorrowland collection embodies nature's artistry in every delicate form and detail. To preserve its lasting beauty, a little care goes a long way. Here, you'll find guidance on maintaining each piece, from general upkeep to material-specific care. Browse for item-specific information and ensure your furniture remains an enduring companion for years to come.

General Care & Maintenance Tips

01

Morpho by Tomorrowland pieces are designed for indoor spaces unless otherwise stated. Maintain a room humidity level between 40% and 60% for optimal preservation.

02

To prevent subtle shifts in colour over time, avoid direct sunlight and occasionally reposition objects placed on the surface.

03

Keep furniture away from heating sources or air-conditioning units to protect it from extreme conditions.

04

Wipe spills immediately to prevent staining.

05

When cleaning wooden surfaces, always follow the direction of the grain for the best results.

06

Use placemats and coasters to protect surfaces from heat, cold, and moisture.

07

Lift furniture when moving rather than dragging it to prevent damage.

08

Ensure water-based floor cleaners do not come into contact with wooden legs or bases, as moisture can leave lasting marks. Nylon glides protect the base of each piece—avoid alcohol-based cleaners on floors they touch.

Regular Care

Dust regularly with a dry cloth. For deeper cleaning or spills, use a damp cloth with natural soap, wiping along the grain. Avoid harsh detergents and dry with a soft cloth to prevent spotting.

To preserve the finish, we recommend using coasters and placemats, as repeated exposure to heat and daily wear may affect the surface over time. Rotate decorative objects such as vases or bowls periodically and wipe away any moisture immediately.

Varnished Wood

Each wooden surface is finished with a protective varnish to enhance its tone and resist stains.

While this offers a safeguard, spills should always be wiped away promptly.

Natural Stone

Quartzite and marble are formed by nature, their beauty refined by time. A penetrating sealer is applied to the tabletop—this soaks into the stone, offering protection from within while preserving the organic elegance of the honed finish.

However, due to the porous nature of stone, exposure to acidic substances such as citrus, wine, or vinegar should be avoided. Always use coasters to prevent condensation from marking the surface. Spills should be removed immediately to prevent absorption. For dried marks, a high-quality cleaner formulated for natural stone is recommended.

Natural Stone — Marble

Marble is more porous and softer than quartzite, making it more susceptible to stains, etching (from acids like lemon juice or vinegar), and scratching.

Natural Stone — Quartzite

Quartzite is much harder and denser than marble, often mistaken for granite in terms of durability. While naturally resistant to stains, periodic sealing is still recommended.

Avoid using topical sealers (film-forming coatings like acrylics or waxes), as they can create an artificial plastic-like appearance, wear unevenly, and trap moisture.

Regular Cleaning

Use a pH-neutral stone cleaner (never anything acidic or abrasive). Avoid vinegar, lemon-based cleaners, or bleach.

Resealing Schedule

Marble: Every 2–3 years, depending on usage and exposure.
Quartzite: Every 3–4 years, depending on usage and exposure.

Note:

To check if resealing is needed, perform the water droplet test:

- Place a few drops of water on the surface.
- If they bead up, the sealer is still effective.
 - If the stone darkens, it's time to reseal.

Regular Care

Dust wooden surfaces with a dry cloth. For cleaning, use a damp cloth and natural soap, wiping along the grain. Dry thoroughly with a soft cloth.

Varnished Wood

A protective varnish enhances the wood’s natural warmth and shields against stains. Even so, immediate removal of spills is advised.

Metal Detailing

Dust metal surfaces regularly with a soft, dry cloth. For a deeper clean, use warm water with mild soap, then rinse and dry thoroughly.

Our stainless-steel elements are crafted for durability and ease of maintenance.

To prevent streaks, always dry surfaces after cleaning. Avoid abrasive tools such as steel wool, as well as harsh chemicals, acids, or bleach, which can compromise the finish.

Upholstery — Fabrics

Do not machine wash unless explicitly stated on the attached label.

Pilling may occur as excess fibres loosen over time—this is a natural characteristic of quality textiles. A fabric shaver can gently remove pilling without damaging the weave.

To keep fabrics fresh, dust with a clean cloth or soft brush. Avoid rubbing, and if vacuuming, use low suction with a soft upholstery attachment.

For spills, blot gently with a clean, dry cloth—do not rub. If stains occur, blot with a slightly damp white cloth, working from the outer edge inward.

Any spills or stains should be treated immediately.

We recommend using Ethnicraft Textile Cleaner followed by the Ethnicraft Fabric Protector.

Always follow the instructions provided on the bottle.

Upholstery — Leather

Our leather is carefully selected for its quality and character, allowing its natural texture and softness to shine. Over time, it will develop a patina, a testament to its lived-in beauty.

As a natural material, leather—particularly nubuck leather—can be prone to markings. Whether full aniline or semi-aniline, the leather will naturally take on a unique appearance over time.

Do not wash or dry clean leather finishes. For cleaning, use the Ethnicraft Leather Care Kit, following the instructions for Natural Cleaner and Leather Care & Protect.

Avoid using these products on sanded or brushed leathers such as nubuck or suede. Always test on a discreet area before full application.
