

No extra work! Matte PET preforms and bottles.

Applying matte masterbatch to have matte PET preforms and bottles saves time and budget for skincare packaging development and production.

Matte Finish Additive

Matte masterbatch produces a consistent, high-quality matte finish on blow-molded PET components.

Cost-effective and competitive.

Keep budget and production time same as regular tinted PET bottles.

Contrary to add-on decorations such as matte spray coating or soft-touch spray, using a matte masterbatch to achieve a frosted surface does not require additional process. It helps project managers keep tight lead times on track and minimize budget while still getting a leveled-up, premium look.

**Reduce waste. Use recycled.
Be recyclable, sustainable.**

It eliminates concerns about scratches and waste resulting from coating processes, and can be made of recycled plastic resin (PCR). Being fully recyclable, it ensures consumers enjoy their daily skincare routines while being sustainable.

Add customizations to stock bottles

Compatible with decorations such as silk screen, hot stamping and many, it enables brands to customize and present the best of a beauty product.
