

a silky
smooth
glide

Duo-color Tubes

The tip of the duo-color tubes is TPE material, customizable for required color matching. It offers a silky smooth glide to highlight the shade of a lip lacquer or as a lip balm to soothe the delicate skin of lips.

TPE for cosmetic products

The impact of the duo-color tubes is its TPE applicator. TPE is a chemically compatible thermoplastic elastomer, and its application for cosmetic packaging creates an influence to improve consumers' experience. A silky, smooth glide over soft and tender lips fulfills the cravings for sensations.

Customizable applicator color

Not just how it works, it's also how it looks. The TPE applicator is customizable to achieve desirable colors. The different colored TPE applicator is distinctive from the connected tube. It satisfies the aesthetic demands of brand designers and the visual impact that the marketing team would love to have to attract consumers.

Green materials

The tube material comes with sustainable options, including post-consumer recycled resin, and biomass plastic, all HDPE, recyclable for the after-use disposal system.

Cosmetic applications

The TPE applicator of excellent elasticity and flexibility offers a silky, velvety feel for the usage. It can be a silky smooth glide to highlight the shade of a lip lacquer or as a lip balm to soothe the delicate skin of lips.
